Project Overview

Project Goals

This Community Health Needs Assessment, a follow-up to similar studies conducted in 2012, 2015, 2018, and 2020, is a systematic, data-driven approach to determining the health status, behaviors, and needs of residents in the service area of Atrium Health Navicent The Medical Center. Subsequently, this information may be used to inform decisions and guide efforts to improve community health and wellness.

A Community Health Needs Assessment provides information so that communities may identify issues of greatest concern and decide to commit resources to those areas, thereby making the greatest possible impact on community health status. This Community Health Needs Assessment will serve as a tool toward reaching three basic goals:

- To improve residents’ health status, increase their life spans, and elevate their overall quality of life. A healthy community is not only one where its residents suffer little from physical and mental illness, but also one where its residents enjoy a high quality of life.

- To reduce the health disparities among residents. By gathering demographic information along with health status and behavior data, it will be possible to identify population segments that are most at-risk for various diseases and injuries. Intervention plans aimed at targeting these individuals may then be developed to combat some of the socio-economic factors that historically have had a negative impact on residents’ health.

- To increase accessibility to preventive services for all community residents. More accessible preventive services will prove beneficial in accomplishing the first goal (improving health status, increasing life spans, and elevating the quality of life), as well as lowering the costs associated with caring for late-stage diseases resulting from a lack of preventive care.

This assessment was conducted on behalf of Atrium Health Navicent The Medical Center by PRC, Inc., a nationally recognized health care consulting firm with extensive experience conducting Community Health Needs Assessments in hundreds of communities across the United States since 1994.

Methodology

This assessment incorporates data from multiple sources, including primary research (through the PRC Community Health Survey and PRC Online Key Informant Survey), as well as secondary research (vital statistics and other existing health-related data). It also allows for trending and comparison to benchmark data at the state and national levels.

PRC Community Health Survey

Survey Instrument

The survey instrument used for this study is based largely on the Centers for Disease Control and Prevention (CDC) Behavioral Risk Factor Surveillance System (BRFSS), as well as various other public health surveys and customized questions addressing gaps in indicator data relative to health promotion and disease prevention objectives and other recognized health issues. The final survey instrument was developed by Atrium Health Navicent and PRC and is similar to the previous surveys used in the region, allowing for data trending.
Community Defined for This Assessment

The study area for the survey effort (referred to as the “Total Area” in this report) is defined as each of the residential ZIP Codes predominantly associated with Baldwin, Bibb, Crawford, Houston, Jones, Monroe, Peach, or Twiggs counties in central Georgia. (In the reporting, Crawford, Jones, Monroe, and Twiggs county findings are grouped into a single combined area, referred to as “Other Counties.”) This community definition, determined based on the ZIP Codes of residence of recent patients of Atrium Health Navicent The Medical Center, is outlined in the following table.

Sample Approach & Design

A precise and carefully executed methodology is critical in asserting the validity of the results gathered in the PRC Community Health Survey. Thus, to ensure the best representation of the population surveyed, a mixed-mode methodology was implemented. This included surveys conducted via telephone (cell phone and landline), as well as through online questionnaires.

The sample design used for this effort consisted of a stratified random sample of 1,260 individuals age 18 and older in the Total Area, including 355 in Bibb County, 303 in Houston County, 200 each in Peach and Baldwin counties, and 202 in the combined Other Counties area. Once the interviews were completed, these were weighted in proportion to the actual population distribution so as to appropriately represent the Total Area as a whole. All administration of the surveys, data collection, and data analysis was conducted by PRC.
For statistical purposes, the maximum rate of error associated with a sample size of 1,260 respondents is ±2.7% at the 95 percent confidence level.

**Expected Error Ranges for a Sample of 1,260 Respondents at the 95 Percent Level of Confidence**

- The “response rate” (the percentage of a population giving a particular response) determines the error rate associated with that response. A “95 percent level of confidence” indicates that responses would fall within the expected error range on 95 out of 100 trials.

**Examples**
- If 10% of the sample of 1,260 respondents answered a certain question with a “yes,” it can be asserted that between 8.4% and 11.6% (10% ± 1.6%) of the total population would offer this response.
- If 50% of respondents said “yes,” one could be certain with a 95 percent level of confidence that between 47.3% and 52.7% (50% ± 2.7%) of the total population would respond “yes” if asked the question.

**Sample Characteristics**

To accurately represent the population studied, PRC strives to minimize bias through application of a proven telephone methodology and random-selection techniques. While this random sampling of the population produces a highly representative sample, it is a common and preferred practice to “weight” the raw data to improve this representativeness even further. This is accomplished by adjusting the results of a random sample to match the geographic distribution and demographic characteristics of the population surveyed (poststratification), so as to eliminate any naturally occurring bias. Specifically, once the raw data are gathered, respondents are examined by key demographic characteristics (namely sex, age, race, ethnicity, and poverty status), and a statistical application package applies weighting variables that produce a sample which more closely matches the population for these characteristics. Thus, while the integrity of each individual’s responses is maintained, one respondent’s responses might contribute to the whole the same weight as, for example, 1.1 respondents. Another respondent, whose demographic characteristics might have been slightly oversampled, might contribute the same weight as 0.9 respondents.

The following chart outlines the characteristics of the Total Area sample for key demographic variables, compared to actual population characteristics revealed in census data. [Note that the sample consisted solely of area residents age 18 and older; data on children were given by proxy by the person most responsible for that child’s health care needs, and these children are not represented demographically in this chart.]
The sample design and the quality control procedures used in the data collection ensure that the sample is representative. Thus, the findings may be generalized to the total population of community members in the defined area with a high degree of confidence.

Online Key Informant Survey

To solicit input from key informants, those individuals who have a broad interest in the health of the community, an Online Key Informant Survey also was implemented as part of this process. A list of recommended participants was provided by Atrium Health Navicent; this list included names and contact information for physicians, public health representatives, other health professionals, social service providers, and a variety of other community leaders. Potential participants were chosen because of their ability to identify primary concerns of the populations with whom they work, as well as of the community overall.

Key informants were contacted by email, introducing the purpose of the survey and providing a link to take the survey online; reminder emails were sent as needed to increase participation. In all, 61 community representatives took part in the Online Key Informant Survey, as outlined in the table that follows.

### Online Key Informant Survey Participation

<table>
<thead>
<tr>
<th>Key Informant Type</th>

<td>8</td>
</tr>
<tr>
<td>Other Health Providers</td>
<td>6</td>
</tr>
<tr>
<td>Social Services Providers</td>
<td>11</td>
</tr>
<tr>
<td>Other Community Leaders</td>
<td>25</td>
</tr>
</tbody>
</table>
Through this process, input was gathered from individuals whose organizations work with low-income, minority, or other medically underserved populations. Final participation included representatives of the organizations outlined below.

- 100 Black Men of Middle Georgia
- Atrium Health Navicent Health EMS
- Baldwin County Board of Commissioners
- Baldwin County Family Connections
- Baldwin County Health Department
- Baldwin Medical Center
- Beverly K. Olsen Children’s Hospital
- Bibb County Division of Family and Children Services
- Bibb County Medical Society
- Central Georgia Fertility Clinic
- Century Bank & Trust
- City of Ft. Valley
- City of Milledgeville
- Community Health Works
- Crawford County Health Department
- Crawford Family Medicine
- Crescent House
- Daybreak
- Family Counseling Center of Central Georgia
- First Choice – Primary Care
- Forsyth City Government
- Georgia College & State University
- Georgia Military College
- Goodwill Industries of Middle Georgia
- Head Start, Macon Bibb County Emergency Operations Center, Inc.
- Houston County Health Department
- Houston Healthcare
- IM-Peds Primary Care, LLC
- Jones County
- Jones County Health Department
- Kids First Pediatrics
- Loaves and Fishes Ministries
- Macon Chamber of Commerce
- Macon Housing Authority
- Macon Transit Authority
- Macon Volunteer Clinic
- Meals On Wheels – Baldwin County
- Meals on Wheels of Macon/Bibb County
- Mercer Medicine
- Mercer University School of Medicine
- Peach County Emergency Medical Services
- Peach County Fire Department
- Peach County School System
- Pharmacy
- Public Health
- River Edge Behavioral Health Services
- Sacred Heart Catholic Church
- School House Health
- Twiggs County Health Department
- United Way of Central Georgia

In the online survey, key informants were asked to rate the degree to which various health issues are a problem in their own community. Follow-up questions asked them to describe why they identify problem areas as such and how these might better be addressed. Results of their ratings, as well as their verbatim comments, are included throughout this report as they relate to the various other data presented.
Public Health, Vital Statistics & Other Data

A variety of existing (secondary) data sources was consulted to complement the research quality of this Community Health Needs Assessment. Data for the Total Area were obtained from the following sources (specific citations are included with the graphs throughout this report):

- Center for Applied Research and Engagement Systems (CARES), University of Missouri Extension, SparkMap (sparkmap.org)
- Centers for Disease Control & Prevention, Office of Infectious Disease, National Center for HIV/AIDS, Viral Hepatitis, STD, and TB Prevention
- Centers for Disease Control & Prevention, Office of Public Health Science Services, National Center for Health Statistics
- National Cancer Institute, State Cancer Profiles
- US Census Bureau, American Community Survey
- US Census Bureau, County Business Patterns
- US Census Bureau, Decennial Census
- US Department of Agriculture, Economic Research Service
- US Department of Health & Human Services
- US Department of Health & Human Services, Health Resources and Services Administration (HRSA)
- US Department of Justice, Federal Bureau of Investigation
- US Department of Labor, Bureau of Labor Statistics

Benchmark Comparisons

Trending

Similar surveys were administered in the Total Area in 2012, 2015, 2018, and 2020 by PRC on behalf of Atrium Health Navicent The Medical Center. Trending data, as revealed by comparison to prior survey results, are provided throughout this report whenever available. Historical data for secondary data indicators are also included for the purposes of trending.

Georgia Data

State-level findings are provided where available as an additional benchmark against which to compare local findings. For survey indicators, these are taken from the most recently published data from the CDC’s Behavioral Risk Factor Surveillance System (BRFSS). For other indicators, these draw from vital statistics, census, and other existing data sources.

National Data

National survey data, which are also provided in comparison charts, are taken from the 2023 PRC National Health Survey; these data may be generalized to the US population with a high degree of confidence. National-level findings (from various existing resources) are also provided for comparison of secondary data indicators.
Healthy People 2030 Objectives

Healthy People provides 10-year, measurable public health objectives — and tools to help track progress toward achieving them. Healthy People identifies public health priorities to help individuals, organizations, and communities across the United States improve health and well-being. Healthy People 2030, the initiative’s fifth iteration, builds on knowledge gained over the first four decades.

The Healthy People 2030 framework was based on recommendations made by the Secretary’s Advisory Committee on National Health Promotion and Disease Prevention Objectives for 2030. After receiving feedback from individuals and organizations and input from subject matter experts, the US Department of Health and Human Services (HHS) approved the framework which helped guide the selection of Healthy People 2030 objectives.

Determining Significance

Differences noted in this report represent those determined to be significant. For survey-derived indicators (which are subject to sampling error), statistical significance is determined based on confidence intervals (at the 95 percent confidence level), using question-specific samples and response rates. For the purpose of this report, “significance” of secondary data indicators (which do not carry sampling error but might be subject to reporting error) is determined by a 15% variation from the comparative measure.

Information Gaps

While this assessment is quite comprehensive, it cannot measure all possible aspects of health in the community, nor can it adequately represent all possible populations of interest. It must be recognized that these information gaps might in some ways limit the ability to assess all of the community’s health needs.

For example, certain population groups — such as the homeless, institutionalized persons, or those who only speak a language other than English or Spanish — are not represented in the survey data. Other population groups — for example, pregnant women, undocumented residents, and members of certain racial/ethnic or immigrant groups — while included in the overall findings, might not be individually identifiable or might not comprise a large-enough sample for independent analyses.

In terms of content, this assessment was designed to provide a comprehensive and broad picture of the health of the overall community. However, there are certainly medical conditions that are not specifically addressed.

Public Comment

Atrium Health Navicent The Medical Center made its prior Community Health Needs Assessment (CHNA) report publicly available through its website; through that mechanism, the hospital requested from the public written comments and feedback regarding the CHNA and implementation strategy. At the time of this writing, Atrium Health Navicent The Medical Center had not received any written comments. However, through population surveys and key informant feedback for this assessment, input from the broader community was considered and taken into account when identifying and prioritizing the significant health needs of the community. Atrium Health Navicent The Medical Center will continue to use its website as a tool to solicit public comments and ensure that these comments are considered in the development of future CHNAs.
IRS Form 990, Schedule H Compliance

For nonprofit hospitals, a Community Health Needs Assessment (CHNA) also serves to satisfy certain requirements of tax reporting, pursuant to provisions of the Patient Protection & Affordable Care Act of 2010. To understand which elements of this report relate to those requested as part of hospitals’ reporting on IRS Schedule H (Form 990), the following table cross-references related sections.

Summary of Findings

Significant Health Needs of the Community

The following “Areas of Opportunity” represent the significant health needs of the community, based on the information gathered through this Community Health Needs Assessment. From these data, opportunities for health improvement exist in the area with regard to the following health issues (see also the summary tables presented in the following section).

The Areas of Opportunity were determined after consideration of various criteria, including: standing in comparison with benchmark data (particularly national data); identified trends; the preponderance of significant findings within topic areas; the magnitude of the issue in terms of the number of persons affected; and the potential health impact of a given issue. These also take into account those issues of greatest concern to the key informants giving input to this process.

### Community Feedback on Prioritization of Health Needs

Prioritization of the health needs identified in this assessment (“Areas of Opportunity” above) was determined based on a prioritization exercise conducted among providers and other community leaders (representing a cross-section of community-based agencies and organizations) as part of the Online Key Informant Survey.

In this process, these key informants were asked to rate the severity of a variety of health issues in the community. Insofar as these health issues were identified through the data above and/or were identified as top concerns among key informants, their ranking of these issues informed the following priorities:

1. Mental Health
2. Diabetes
3. Nutrition, Physical Activity & Weight
4. Substance Use
5. Heart Disease & Stroke
6. Injury & Violence
7. Tobacco Use
8. Disabling Conditions
9. Sexual Health
10. Access to Health Care Services
11. Infant Health & Family Planning
12. Oral Health
13. Cancer
14. Respiratory Diseases
Summary Tables: Comparisons With Benchmark Data

Reading the Summary Tables

In the following tables, Total Area results are shown in the larger, teal column.

The columns to the left of the Total Area column provide comparisons among the five communities, identifying differences for each as “better than” (◯), “worse than” (●), or “similar to” (⊙) the combined opposing areas.

The columns to the right of the Total Area column provide trending as well as comparisons between local data and any available state and national findings, and Healthy People 2030 objectives. Again, symbols indicate whether the Total Area compares favorably (◯), unfavorably (●), or comparably (⊙) to these external data.

Tip: Indicator labels beginning with a “%” symbol are taken from the PRC Community Health Survey; the remaining indicators are taken from secondary data sources.

Note that blank table cells signify that data are not available or are not reliable for that area and/or for that indicator.

Population Change 2010-2020

A significant positive or negative shift in total population over time impacts health care providers and the utilization of community resources.

Between the 2010 and 2020 US Censuses, the population of the Total Area increased by 23,566 persons, or 5.3%.

**Benchmark** ► A smaller proportional increase than in Georgia and the US overall.

**Disparity** ► The greatest increase in population occurred in Houston County.
Change in Total Population
(Percentage Change Between 2010 and 2020)

This map shows the areas of greatest increase or decrease in population between 2010 and 2020.

Sources:
Urban/Rural Population

Urban areas are identified using population density, count, and size thresholds. Urban areas also include territory with a high degree of impervious surface (development). Rural areas are all areas that are not urban.

The Total Area is predominantly urban, with two-thirds of the population living in areas designated as urban.

**Benchmark** ► A smaller percentage of urban residents when compared with the US (Georgia is fairly evenly split between urban and rural residents).

**Disparity** ► The urban/rural divide varies considerably among the counties.

**Notes:**
- This indicator reports the percentage of population living in urban and rural areas. Urban areas are identified using population density, count, and size thresholds. Urban areas also include territory with a high degree of impervious surface (development). Rural areas are all areas that are not urban.

---

Age

It is important to understand the age distribution of the population, as different age groups have unique health needs that should be considered separately from others along the age spectrum.

In the Total Area, 23.7% of the population are children age 0-17; another 61.2% are age 18 to 64, while 15.1% are age 65 and older.

**Disparity** ► The combined Other Counties area houses the largest proportion of older (age 65+) population.

Median Age

While Bibb, Houston, Peach, and Baldwin counties are “younger” than the state and the nation (their median ages are lower), note the higher median ages in the Other Counties area. (Composite medians are not available for the Other Counties or Total Area as a whole.)

The following map provides an illustration of the median age by census tract throughout the Total Area.

Race & Ethnicity

Race

In looking at race independent of ethnicity (Hispanic or Latino origin), 52.7% of Total Area residents are White and 39.8% are Black.

Benchmark  ► The Total Area houses a proportionally smaller White population and a larger Black population when compared with the state and (especially) the US overall.

Disparity  ► Viewed by county, the Other Counties area is less diverse than Bibb, Houston, Peach, and Baldwin counties.

Notes:  
- People who identify their origin as Hispanic, Latino, or Spanish may be of any race.
Linguistic Isolation

Less than one percent (0.8%) of the Total Area population age 5 and older live in a home in which no person age 14 or older is proficient in English (speaking only English or speaking English “very well”).

Benchmark ► Well below the state and national percentages.

Disparity ► Slightly higher in Bibb and Houston counties.

• Center for Applied Research and Engagement Systems (CARES), University of Missouri Extension. Retrieved June 2023 via SparkMap (sparkmap.org)

Notes: • This indicator reports the percentage of the population age 5+ who live in a home in which no person age 14+ speaks only English, or in which no person age 14+ speaks an non-English language and speak English “very well.”
Social Determinants of Health

About Social Determinants of Health

Social determinants of health (SDOH) are the conditions in the environments where people are born, live, learn, work, play, worship, and age that affect a wide range of health, functioning, and quality-of-life outcomes and risks.

Social determinants of health (SDOH) have a major impact on people’s health, well-being, and quality of life. Examples of SDOH include:

- Safe housing, transportation, and neighborhoods
- Racism, discrimination, and violence
- Education, job opportunities, and income
- Access to nutritious foods and physical activity opportunities
- Polluted air and water
- Language and literacy skills

SDOH also contribute to wide health disparities and inequities. For example, people who don’t have access to grocery stores with healthy foods are less likely to have good nutrition. That raises their risk of health conditions like heart disease, diabetes, and obesity — and even lowers life expectancy relative to people who do have access to healthy foods.

Just promoting healthy choices won’t eliminate these and other health disparities. Instead, public health organizations and their partners in sectors like education, transportation, and housing need to take action to improve the conditions in people’s environments.

- Healthy People 2030 (https://health.gov/healthypeople)

Poverty

The latest census estimate shows 17.6% of the Total Area total population living below the federal poverty level.

Benchmark ► Worse than Georgia and US percentages.
Disparity ► Highest in Bibb and Baldwin counties.

Among just children (ages 0 to 17), this percentage in the Total Area is 24.0% (representing nearly 26,000 children).

Benchmark ► Well above state and national percentages.
Disparity ► Child poverty is highest in Bibb and Peach counties.

Education

Among the Total Area population age 25 and older, an estimated 11.3% (over 34,000 people) do not have a high school education.

Disparity ▶ Lowest among Houston County residents.

Population With No High School Diploma
(Adults Age 25 and Older; 2017-2021)

Sources: * US Census Bureau/American Community Survey, >5-year estimates.
Employment

According to data derived from the US Department of Labor, the unemployment rate in the Total Area as of December 2022 was 3.1%.

**Trend** Following a significant increase in 2020 (attributed to the COVID-19 pandemic), unemployment has dropped below pre-pandemic levels, and much lower than found a decade ago.

**Unemployment Rate**

![Unemployment Rate Chart]

Sources:
- US Department of Labor, Bureau of Labor Statistics,

Notes:
- Percent of non-institutionalized population age 16+ who are unemployed (not seasonally adjusted).
Financial Resilience

A total of 31.6% of Total Area residents would **not** be able to afford an unexpected $400 expense without going into debt.

Disparity ▶ Lowest among Houston County respondents. Viewed by demographic characteristics, the prevalence decreases with age and income level and is reported more often among renters, women, persons of color, and LGBTQ+ respondents.

- Includes respondents who say they would not be able to pay for a $400 emergency expense either with cash, by taking money from their checking or savings account, or by putting it on a credit card that they could pay in full at the next statement.

NOTE: For indicators derived from the population-based survey administered as part of this project, text describes significant differences determined through statistical testing. The reader can assume that differences (against or among local findings) that are not mentioned are ones that are not statistically significant.
**Income & Race/Ethnicity**

**Income** In income categories used to segment survey data in this report are based on administrative poverty thresholds determined by the US Department of Health & Human Services. These guidelines define poverty status by household income level and number of persons in the household (e.g., the 2022 guidelines place the poverty threshold for a family of four at $27,750 annual household income or lower). In sample segmentation: “very low income” refers to community members living in a household with defined poverty status; “low income” refers to households with incomes just above the poverty level and earning up to twice (100%-199% of) the poverty threshold; and “mid/high income” refers to those households living on incomes which are twice or more (≥200%) of the federal poverty level.

**Race & Ethnicity** In analyzing survey results, mutually exclusive race and ethnicity categories are used. All Hispanic respondents are grouped, regardless of identity with any other race group. Data are also detailed for individuals identifying with a race category, without Hispanic origin. “White” reflects those who identify as White alone, without Hispanic origin; “Black” reflects those who identify as Black or African American alone, without Hispanic origin. “Diverse Races” includes those who identify as American Indian or Alaska Native, Asian, Native Hawaiian/Pacific Islander, or as being of multiple races, without Hispanic origin.

**Housing**

**Housing Insecurity**

Most surveyed adults rarely, if ever, worry about the cost of housing.

**Frequency of Worry or Stress**

Notes: Asked of all respondents.
Low Food Access

US Department of Agriculture data show that 30.0% of the Total Area population (representing over 133,000 residents) have low food access, meaning that they do not live near a supermarket or large grocery store.

Benchmark ► Well above the national percentage.

Disparity ► Highest in Houston County.

Notes: • Low food access is defined as living more than 1 mile from the nearest supermarket, supercenter, or large grocery store for urban census tracts, and 10 miles for rural ones.
**Food Insecurity**

Overall, 35.4% of community residents are determined to be “food insecure,” having run out of food in the past year and/or been worried about running out of food.

**Benchmark** ► Lower than the national prevalence.

**Disparity** ► Affecting nearly half of Baldwin County respondents. The prevalence decreases with age and income level, and is found more often among women, people of color, and LGBTQ+ respondents.

# Key Informant Input:
## Social Determinants of Health

The greatest share of key informants taking part in an online survey characterized *Social Determinants of Health* as a “major problem” in the community.

### Perceptions of Social Determinants of Health as a Problem in the Community

(Among Key Informants; Total Area, 2023)

<table>
<thead>
<tr>
<th>Issue</th>
<th>Major Problem</th>
<th>Moderate Problem</th>
<th>Minor Problem</th>
<th>No Problem At All</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>57.4%</td>
<td>26.2%</td>
<td>13.1%</td>
<td>0.3%</td>
</tr>
</tbody>
</table>

*Source:* 2023 PRC Online Key Informant Survey; PRC, Inc.
*Notes:* Asked of all respondents.

Among those rating this issue as a “major problem,” reasons related to the following:

### Income/Poverty

- Widespread poverty in Bibb County. Lower educational achievement among many in county. – Physician (Bibb County)
- Health care, health insurance, etc., has always been an issue that is closely related to socioeconomic status. In Milledgeville and Baldwin County, we are below the State’s poverty level in income and jobs. This has a direct impact on health and well-being. – Community Leader (Baldwin County)
- Poverty, lack of education. – Physician (Baldwin County)
- Income, housing, transportation. – Community Leader (Baldwin County)
- I believe the largest determinants of health in Baldwin County have to do with so many living below poverty level. Living below poverty level affects housing, education, and health immensely. – Social Services Provider (Baldwin County)
- Poverty, lower wages compared to surrounding areas. – Health Provider (Bibb County)
- Poverty, families who don’t make a wage that will sustain a family. – Social Services Provider (Bibb County)
- The poverty level in Macon is one of the highest in the county. The need for social justice and access is vital to creating a healthier community. This is a generational issue; we can’t start with the children of the parents/grandparents/caregivers who are not or have not been given access to basic needs. – Social Services Provider (Bibb County)
- Socioeconomic factors in the county. – Physician (Bibb County)
- High poverty rates. – Community Leader (Bibb County)

### Housing

- There is high levels of dysfunction and dilapidation of community housing on the south side of the county as well as among racially marginalized population. – Public Health Representative (Baldwin County)
- Affordable housing is a major problem! – Community Leader (Bibb County)
- Affordable housing is a major issue in Bibb County, but the extent of the issue is likely unknown by many in the community. Since the pandemic, the cost of housing has increased substantially, leaving many unable to afford housing in the area. There are many families residing in hotels that are not up to par, and even their cars. Bibb County's public housing is doing a great job with renovating public housing. However, as a result of the renovations, the number of existing housing units are decreasing. As a result, there is an additional shortage in affordable housing. – Social Services Provider (Bibb County)
A lack of affordable, comfortable housing that someone would be proud to live in. We have absent landlords that do not take care of the rental property but continue to charge top dollar for rent. Apartment complexes that are available have long waiting lists and some have less than desirable living conditions. Children need a good healthy home life to assist them in getting a good education. – Community Leader (Monroe County)

Housing, income, and education problems were sites in the 2022 NHHD health assessment. Environmental and discrimination are usually not reported directly. – Community Leader (Peach County)

Lack of affordable housing – Community Leader (Bibb County)

Unstable housing and lack of transportation are major barriers. – Social Services Provider (Bibb County)

There is a lack of safe affordable housing. – Social Services Provider (Bibb County)

### Awareness/Education

Educational level of citizens; rural population and lack of community outreach to improve conditions. – Health Provider (Baldwin County)

They are for all communities. Lack of awareness and funding. – Physician (Bibb County)

Lack of knowledge and income. – Community Leader (Bibb County)

Education, employability, employment. – Community Leader (Bibb County)

### Crime

Many illnesses are attributed to social determinants of health, which also includes crime rates and other issues. Per statistics, substance use, and mental illnesses tend to plague individuals in lower socioeconomic statuses, and they are also the individuals that lack sufficient resources and have limited education on resources. This leads to decreased health and higher crime rates. – Health Provider (Baldwin County)

### Incidence/Prevalence

Mental health is one of the major contributions that affects our health population. – Community Leader (Baldwin County)

### Food Deserts

Our food deserts have created a lack of access to food such as medicine and quality of life. We have the highest childhood obesity statistics, related to food access. – Community Leader (Bibb County)

### Single-Parent Households

With 50% of children born to unwed mothers, you automatically have an undesirable situation: one income supporting a family. These children are likely to be raised in poor homes with fewer health care options. – Community Leader (Baldwin County)

### Homelessness

Homelessness and lack of temporary shelter beds for single men and women. Lack of place to go when people are coming out of the hospital. – Social Services Provider (Bibb County)
Health Status
Overall Health Status

Most Total Area residents rate their overall health favorably (responding “excellent,” “very good,” or “good”).

![Self-Reported Health Status](image)

However, one in five Total Area adults (19.8%) believes that their overall health is “fair” or “poor.”

- **Benchmark** ► Higher than the national figure.
- **Disparity** ► Highest in the combined Other Counties area. The percentage increases with age, decreases with household income level, and is reported more often among White respondents and Black respondents.

**Experience “Fair” or “Poor” Overall Health**

Mental Health

About Mental Health & Mental Disorders

About half of all people in the United States will be diagnosed with a mental disorder at some point in their lifetime. Mental disorders affect people of all ages and racial/ethnic groups, but some populations are disproportionately affected. And estimates suggest that only half of all people with mental disorders get the treatment they need.

In addition, mental health and physical health are closely connected. Mental disorders like depression and anxiety can affect people’s ability to take part in healthy behaviors. Similarly, physical health problems can make it harder for people to get treatment for mental disorders. Increasing screening for mental disorders can help people get the treatment they need.

– Healthy People 2030 (https://health.gov/healthypeople)

Mental Health Status

Most Total Area adults rate their overall mental health favorably (“excellent,” “very good,” or “good”).

![Self-Reported Mental Health Status](image)

- **Excellent**: 22.7%
- **Very Good**: 28.3%
- **Good**: 24.2%
- **Fair**: 18.2%
- **Poor**: 6.6%

**Sources:** 2023 FHC Community Health Survey, FHC, Inc. [Item 77]

**Notes:** Asked of all respondents.

However, 24.8% believe that their overall mental health is “fair” or “poor.”

**Trend** ▶ Marks steady and statistically significant increases since 2012.

**Disparity** ▶ Unfavorably high among Baldwin County respondents.
Experience “Fair” or “Poor” Mental Health

Depression

Diagnosed Depression

A total of 26.0% of Total Area adults have been diagnosed by a physician as having a depressive disorder (such as depression, major depression, dysthymia, or minor depression).

Benchmark ► Higher than the Georgia prevalence but lower than the national figure.

Trend ► Increasing significantly from 2015 findings.

Have Been Diagnosed With a Depressive Disorder

Sources: [2023 PBC Online Key Informant Survey; PBC, Inc]
Notes: [Asked of all respondents]

Among those rating this issue as a “major problem,” reasons related to the following:

Access to Care/Services

- Same problem for the entire state and most of the country. Beds, mental health professionals available, resources available, state policy. – Community Leader (Baldwin County)
- Few services. Homelessness, combined with drug use. – Community Leader (Baldwin County)
- Access to care and the utilization of emergency services as opposed to routine and early care options. – Health Provider (Baldwin County)
- Lack of treatment facilities for mental health, lack of providers for mental health. There are individuals who should be institutionalized because they cannot take care of themselves. Unfortunately, we don’t have a modern way of providing treatment and living facilities for those who cannot take care of themselves. – Community Leader (Baldwin County)
- Resources. – Community Leader (Baldwin County)
- We need more long-term residential treatment programs and an inpatient crisis center instead of having to transport individuals across the state of Georgia for immediate treatment. This will help alleviate our jail population. – Community Leader (Baldwin County)
- We do not have local treatment facilities for those with mental health issues. The ‘lock them up’ mentality does nothing to address the real issue those with mental health issues are experiencing. – Community Leader (Monroe County)
- Access to long-term solutions. – Community Leader (Bibb County)
- No treatment facilities. – Community Leader (Peach County)
- There are very limited treatment options in the community. The community is seeing an increased crime rate from violent crimes and an increased use of illegal drugs. – Public Health Representative (Houston County)
- Access to acute and chronic mental health care in the community. – Physician (Peach County)
- Closing Central State Hospital, the part that dealt with psychiatric services and crisis management. People across the state came in or were brought in for treatment or drug regulation and learned coping mechanisms to deal with stress effectively. – Community Leader (Baldwin County)
- Limited resources and access to care including therapy and counseling services. – Physician (Bibb County)

Denial/Stigma

- Mental health is somewhat still taboo in many communities and so people go without recognition, diagnosis, and care. There is also a high burden of anxiety and depression among the younger age group from anecdotal data. – Public Health Representative (Baldwin County)
- Acknowledging the issue, finding, and using available resources such as River Edge, Family Counseling Center, etc. – Community Leader (Bibb County)
There is still a huge stigma associated with mental health; no one wants to admit they are depressed. Also, there are not enough resources to care for the amount of clients with mental health issues that we have in our community. The choice was made to close Central State Campus and put those needing 24-hour care in group homes or leaving them to try to make it on their own, which has led to an increase in homelessness. – Public Health Representative (Baldwin County)

Mental health has been viewed as a sign of weakness. – Community Leader (Bibb County)

Lack of Providers

There is a shortage of mental health care workers. Most patients struggle to get in to see a counselor and a psychiatrist. There is some recent help with telehealth psychiatric consultations, but these are few and far between. – Physician (Baldwin County)

Limited access to qualified therapists. Medication alone cannot solve the problem. Not taking medication properly, either due to side effects or cost. Self-medication. Lack of coping skills. Limited family support in some cases. – Health Provider (Bibb County)

Not enough psychology counseling and assistance to help with a mental health crisis. – Community Leader (Baldwin County)

Lack of private psychiatrists and counselors. – Physician (Baldwin County)

Few providers in the community. Stigma against mental health treatment. Unmanaged illness. – Physician (Bibb County)

No providers and a reluctance to seek treatment. – Public Health Representative (Twiggs County)

Affordable Care/Services

Access to affordable help. – Social Services Provider (Houston County)

Access to affordable care. – Community Leader (Bibb County)

Unaffordable or inability to get psychologists and counselors. – Physician (Bibb County)

Affordable access to therapists and psychiatric providers. – Social Services Provider (Bibb County)

Access to Care for Uninsured/Underinsured

Lack of access, especially for people who are uninsured and too sick to follow the process to get into River Edge. – Social Services Provider (Bibb County)

There are two: the lack of access for the underserved and underinsured, those in poverty, and those with mental illness and who need longer-term care. – Social Services Provider (Bibb County)

Access, especially for the underinsured. – Physician (Bibb County)

Co-Occurrences

Peach County has one of the highest foreclosures and poverty rates in the north central health district per the 2022 NCHD health assessment. Access to mental health providers, housing for the homeless, and mental health facility for short-term stay rather than prison system. – Community Leader (Peach County)

Substance abuse, access to care for uninsured. – Health Provider (Houston County)

Untreated mental health often leads to violence or homelessness. There is still a stigma associated with mental health services, especially in Black communities. – Social Services Provider (Bibb County)

Disease Management

One of the biggest challenges of Baldwin County and surrounding areas is mental health. So many people who were at Central State Hospital are now in the community. This is unfair to them and the community. If these individuals don’t adhere to their prescribed medication or therapy, these individuals can be a harm to themselves and others. That leads to an issue in our jails and prison system - overwhelming an already stressed workforce! These individuals are having children as well and this cycle starts over and affects our school systems. – Public Health Representative (Baldwin County)

Here in Baldwin County, we have a large number of citizens with mental health issues living with little to no monitoring of their medication consumption. As a result, we often find these same citizens off medication, committing crimes and/or harming themselves or others. It is often said that the greater number of citizens with mental health issues living in our community is because of Central State Hospital closing. These citizens often find themselves in our local hospital or County Jail, neither of which have the manpower or resources to deal with the problem. Proper training is expensive and hard to maintain for both the hospital and the jail. This problem drains resources and attention needed on other issues in our community. – Social Services Provider (Baldwin County)
Housing

Housing is a big concern for many individuals with mental health concerns due to families being overwhelmed. Access to services such as individual therapy and/or group therapy is also a major concern due to staff shortages within the behavioral health system. – Health Provider (Baldwin County)

Lack of housing for those who are homeless due to mental challenges. – Community Leader (Bibb County)

Lack of Hope

A lack of hope. This may not seem like a health issue, but it has a direct impact on health. There are ways to measure hope, and there is a direct correlation between hope and improved outcomes. This is becoming a recognized part of domestic violence programs, and needs to be expanded into broader health discussions. – Social Services Provider (Bibb County)

Diagnosis/Treatment

There are numerous individuals in the area with mental health issues that have difficulty dealing with others and daily living. Many instances involve law enforcement, and the individuals are taken to jail rather than a facility that can provide the proper treatment. – Community Leader (Peach County)

Funding

Over four decades of defunding the mental health system. – Community Leader (Peach County)

Government/Policy

They find themselves living in a broken system that has imploded on itself. – Social Services Provider (Bibb County)
Death, Disease & Chronic Conditions
Leading Causes of Death

Distribution of Deaths by Cause

Together, heart disease and cancers accounted for over one-third of all deaths in the Total Area in 2020.

Age-Adjusted Death Rates for Selected Causes

Age-Adjusted Death Rates

In order to compare mortality in the region with other localities (in this case, Georgia and the United States), it is necessary to look at rates of death — these are figures which represent the number of deaths in relation to the population size (such as deaths per 100,000 population, as is used here).

Furthermore, in order to compare localities without undue bias toward younger or older populations, the common convention is to adjust the data to some common baseline age distribution. Use of these “age-adjusted” rates provides the most valuable means of gauging mortality against benchmark data, as well as Healthy People 2030 objectives.

Note that deaths are coded using the Tenth Revision of the International Statistical Classification of Diseases and Related Health Problems (ICD-10). Rates are per 100,000 population, age-adjusted to the 2000 US Standard Population.
The following chart outlines 2018-2020 annual average age-adjusted death rates per 100,000 population for selected causes of death in the Total Area.

Leading causes of death are discussed in greater detail in subsequent sections of this report.

Cardiovascular Disease

About Heart Disease & Stroke

Heart disease and stroke can result in poor quality of life, disability, and death. Though both diseases are common, they can often be prevented by controlling risk factors like high blood pressure and high cholesterol through treatment.

In addition, making sure people who experience a cardiovascular emergency — like stroke, heart attack, or cardiac arrest — get timely recommended treatment can reduce their risk for long-term disability and death. Teaching people to recognize symptoms is key to helping more people get the treatment they need.

— Healthy People 2030 (https://health.gov/healthypeople)

Age-Adjusted Heart Disease & Stroke Deaths

Heart Disease Deaths

Between 2018 and 2020, there was an annual average age-adjusted heart disease mortality rate of 235.8 deaths per 100,000 population in the Total Area.

Benchmark ► Much worse than the state and national rates. Fails to satisfy the Healthy People 2030 objective.

Disparity ► Highest in Baldwin County. By race, higher among Black residents.

Total Cardiovascular Risk

Total cardiovascular risk reflects the individual-level risk factors which put a person at increased risk for cardiovascular disease, including:

- High Blood Pressure
- High Blood Cholesterol
- Cigarette Smoking
- Physical Inactivity
- Overweight/Obesity

Modifying these behaviors and adhering to treatment for high blood pressure and cholesterol are critical both for preventing and for controlling cardiovascular disease.

Most Total Area adults (96.0%) report one or more cardiovascular risk factors, such as being overweight, smoking cigarettes, being physically inactive, or having high blood pressure or cholesterol.

Benchmark ► Higher than the national prevalence.

Trend ► Increasing significantly from earlier survey findings.

Disparity ► The prevalence increases with household income level and is reported more often among men and adults age 40 and older.

Notes:
- Reflects all respondents.
- Cardiovascular risk is defined as exhibiting one or more of the following: 1) no leisure-time physical activity; 2) regular/occasional cigarette smoking; 3) high blood pressure; 4) high blood cholesterol; and/or 5) being overweight/obese.
Key Informant Input: Heart Disease & Stroke

Over half of key informants taking part in an online survey characterized Heart Disease & Stroke as a “major problem” in the community.

Perceptions of Heart Disease & Stroke as a Problem in the Community
(Among Key Informants; Total Area, 2023)

- Major Problem
- Moderate Problem
- Minor Problem
- No Problem At All

55.9% 28.8% 13.6% 1.7%

Among those rating this issue as a “major problem,” reasons related to the following:

Incidence/Prevalence

Community health assessments and insurance utilization analyses indicate that both stroke and heart disease are significant issues for this community. – Public Health Representative (Houston County)

There are many people, young and old, who are being stricken with these types of illnesses. The impairment caused round-the-clock care for the patients. Due to the shortage of licensed therapists, the ability to adequately help the patient’s recovery time is significant when a medical emergency happens. When the patient returns home, they are limited to adequate support teams. – Community Leader (Baldwin County)

I have had two family members with strokes and two neighbors with strokes. – Physician (Bibb County)

Stroke belt. – Health Provider (Houston County)

We live in the stroke belt. High rates of stroke and heart disease, frequently affecting relatively young people. Terrible diets contribute. – Social Services Provider (Bibb County)

It is more prevalent in this community. – Community Leader (Peach County)
Lifestyle

Sedentary lifestyle, high fat diet, processed food, high cost of healthier food. – Health Provider (Bibb County)
Citizen dietary habits, persistent obesity, and lack of exercise. – Health Provider (Baldwin County)
We are in the south and everyone loves fried food. Obesity is a major issue in this community and is a predisposing factor for both heart disease and stroke. Every time we get a new eating establishment it is fast food, (burgers, fried chicken, French fries, etc.). We have a high low-income population and fast food is cheap, in addition to a lack of educational resources. – Public Health Representative (Baldwin County)
Poor eating habits, eating fried foods, eating fast foods, high levels of soft drinks and carbohydrates. Daily stress and worry over health, safety, and family issues. – Community Leader (Baldwin County)
Weight, poor nutrition, lack of exercise, not seeking regular medical preventive care, and not being able to afford medications. – Social Services Provider (Bibb County)
Lifestyle factors and access to care. – Physician (Bibb County)
Lifestyle and socioeconomic factors. – Social Services Provider (Bibb County)

Nutrition

Poor diet and education on medications. – Physician (Bibb County)
Diet of the region and hypertension. – Physician (Bibb County)
Poor diet and exercise. – Community Leader (Baldwin County)

Access to Care/Services

Our hospital has few heart services. – Community Leader (Baldwin County)
Limited access to health care, medications, and fresh food. – Physician (Peach County)

Awareness/Education

Lack of education, access to health care and medications. – Physician (Baldwin County)
This is a lack of education and healthy lifestyle. This seems to be affecting a younger population and not just older citizens. – Social Services Provider (Bibb County)

Tobacco Use

Tobacco use, alcohol consumption, poor diet and physical inactivity are major issues in the community and leading risk factors for these conditions. People are also able to maintain a proper diet due to inadequate access to healthy foods. The elderly without transportation and on a fixed income are disproportionately affected. – Public Health Representative (Baldwin County)
High tobacco usage, lack of jobs offering affordable health insurance, as well as ignorance about easily available screening tests. – Community Leader (Baldwin County)

Prevention/Screenings

Blood pressure is known as the silent killer because you can be asymptomatic for years until your heart attack or stroke. Preventative screenings are few and far between due to the staffing of the local medical offices and community members’ reluctance to seek care. – Public Health Representative (Twiggs County)

Access to Affordable Healthy Food

There is limited access to real foods and an abundant access to fast foods and processed foods. Even the local food bank distributes heavily processed foods, canned goods, and sugar-filled items. – Community Leader (Peach County)

Disease Management

An at-risk population with uncontrolled or poorly controlled hypertension. – Community Leader (Peach County)

Income/Poverty

Most individuals with low to moderate income wait for health care because they are focused on their basic needs. – Community Leader (Bibb County)
Cancer

About Cancer

The cancer death rate has declined in recent decades, but over 600,000 people still die from cancer each year in the United States. Death rates are higher for some cancers and in some racial/ethnic minority groups. These disparities are often linked to social determinants of health, including education, economic status, and access to health care.

Interventions to promote evidence-based cancer screenings — such as screenings for lung, breast, cervical, and colorectal cancer — can help reduce cancer deaths. Other effective prevention strategies include programs that increase HPV vaccine use, prevent tobacco use and promote quitting, and promote healthy eating and physical activity. In addition, effective targeted therapies and personalized treatment are key to helping people with cancer live longer.

– Healthy People 2030 (https://health.gov/healthypeople)

Age-Adjusted Cancer Deaths

All Cancer Deaths

Between 2018 and 2020, there was an annual average age-adjusted cancer mortality rate of 157.9 deaths per 100,000 population in the Total Area.

Benchmark ▶ Far from satisfying the Healthy People 2030 objective.

Trend ▶ Decreasing over the past decade, echoing state and national trends.

Disparity ▶ Highest in Peach County. Somewhat higher among Black residents.

Cancer Incidence

“Incidence rate” or “case rate” is the number of newly diagnosed cases in a given population in a given year, regardless of outcome. These rates are also age-adjusted. It is usually expressed as cases per 100,000 population per year.

The highest cancer incidence rates are for prostate cancer and female breast cancer.

Benchmark ➤ Prostate cancer incidence is higher than the US rate.

Notes:  • This indicator reports the age-adjusted incidence rate (cases per 100,000 population per year) of cancers, adjusted to 2000 US standard population.

Prevalence of Cancer

A total of 9.8% of surveyed Total Area adults report having ever been diagnosed with cancer.

Benchmark ➤ Worse than the US figure.

Disparity ➤ The prevalence increases with age and is reported more often among White residents, adults of Diverse Races, and LGBTQ+ respondents.
Prevalence of Cancer

**Total Area**

*The most common types of cancers cited locally include:
1. Skin/Melanoma: 22.9%
2. Breast Cancer: 17.4%
3. Prostate Cancer: 15.1%*

Notes:  
- Asked of all respondents.
Cancer Screenings

The American Cancer Society recommends that both men and women get a cancer-related checkup during a regular doctor’s checkup. It should include examination for cancers of the thyroid, testicles, ovaries, lymph nodes, oral cavity, and skin, as well as health counseling about tobacco, sun exposure, diet and nutrition, risk factors, sexual practices, and environmental and occupational exposures. Screening levels in the community were measured in the PRC Community Health Survey relative to the following cancer sites:

**Female Breast Cancer**

The US Preventive Services Task Force (USPSTF) recommends biennial screening mammography for women age 50 to 74 years.

**Cervical Cancer**

The US Preventive Services Task Force (USPSTF) recommends screening for cervical cancer every 3 years with cervical cytology alone in women age 21 to 29 years. For women age 30 to 65 years, the USPSTF recommends screening every 3 years with cervical cytology alone, every 5 years with high-risk human papillomavirus (hrHPV) testing alone, or every 5 years with hrHPV testing in combination with cytology (cotesting). The USPSTF recommends against screening for cervical cancer in women who have had a hysterectomy with removal of the cervix and do not have a history of a high-grade precancerous lesion (i.e., cervical intraepithelial neoplasia [CIN] grade 2 or 3) or cervical cancer.

**Colorectal Cancer**

The US Preventive Services Task Force (USPSTF) recommends screening for colorectal cancer starting at age 50 years and continuing until age 75 years.

Note that other organizations (e.g., American Cancer Society, American Academy of Family Physicians, American College of Physicians, National Cancer Institute) may have slightly different screening guidelines.

Among women age 50 to 74, 83.9% have had a mammogram within the past 2 years.

Benchmark ➤ Well above the state and national percentages.

Among Total Area women age 21 to 65, 75.9% have had appropriate cervical cancer screening.

Benchmark ➤ Fails to satisfy the Healthy People 2030 objective.

Trend ➤ Fluctuating over time; significantly lower than 2012 findings.
Among all adults age 50 to 75, 82.3% have had appropriate colorectal cancer screening.

**Benchmark** ▶ Higher than the Georgia and US figures. Satisfies the Healthy People 2030 objective.

**Disparity** ▶ Lowest among Baldwin County respondents (not shown).

Key Informant Input: Cancer

The greatest share of key informants taking part in an online survey characterized Cancer as a “moderate problem” in the community.

Perceptions of Cancer as a Problem in the Community
(Among Key Informants; Total Area, 2023)

- Major Problem 24.6%
- Moderate Problem 57.9%
- Minor Problem 15.8%
- No Problem At All 1.8%

Sources: 90% PBC Online Key Informant Survey, PBC, Inc
Notes: Asked of all respondents.

Among those rating this issue as a “major problem,” reasons related to the following:

Incidence/Prevalence

The rising numbers of cancer cases over the past ten years. – Community Leader (Peach County)
Breast, pancreatitis, and prostate cancer is rapidly increasing in this community. – Community Leader (Peach County)
I have many patients with various kinds of cancer from age 20 and above. Many patients don’t have access to cancer screening tests. – Physician (Peach County)
One of the top diseases and causes of death in Houston County. – Health Provider (Houston County)

Prevention/Screenings

There are more people diagnosed each year. There are two issues: no access to early detection due to cost and lack of insurance, and with a late diagnosis, there appears to be more late-stage cancer and the need for more services and access to treatment. – Social Services Provider (Bibb County)
A lot of people are diagnosed with cancer when it is already stage 3 or 4 due to a lack of preventative care of recommended screenings. – Health Provider (Bibb County)

Health Disparities

Late diagnosis, subpar quality of care as measured by clinical outcomes and patient reported outcomes. Poor access, huge source of healthcare disparity tied to economic status, and social determinants to include race. – Physician (Bibb County)
Health disparities in access to healthcare, preventative services, and cancer treatment, which leads to disparities that delay diagnosis and treatment and socioeconomic factors. – Community Leader (Baldwin County)

Access to Care for Uninsured/Underinsured

So many people have been diagnosed with late stages after not receiving medical attention because of jobs, due to lack of adequate insurance. – Community Leader (Baldwin County)
Cancer care is very expensive and some individuals who are in need of care just cannot afford the treatment. Some have insurance and some don’t, which makes it very difficult to get the proper care needed. – Community Leader (Baldwin County)

Access to Care/Services

There are no close facilities or providers closer than Warner Robins or Macon. Studies have shown cardiovascular and cancer deaths rose in the post-COVID period, in 2021. – Community Leader (Peach County)

Lifestyle

There is a high rate of cancer in Crawford County linked to poor lifestyle choices. – Physician (Crawford County)
Respiratory Disease

About Respiratory Disease

Respiratory diseases affect millions of people in the United States. ...More than 25 million people in the United States have asthma. Strategies to reduce environmental triggers and make sure people get the right medications can help prevent hospital visits for asthma. In addition, more than 16 million people in the United States have COPD (chronic obstructive pulmonary disease), which is a major cause of death. Strategies to prevent the disease — like reducing air pollution and helping people quit smoking — are key to reducing deaths from COPD.

Note that this section also includes data relative to COVID-19 (coronavirus disease).

Age-Adjusted Respiratory Disease Deaths

Lung Disease Deaths

Between 2018 and 2020, the Total Area reported an annual average age-adjusted lung disease mortality rate of 50.8 deaths per 100,000 population.

Benchmark ► Worse than state and national rates.

Disparity ► Highest among Peach County residents. Much higher in the White community.

Key Informant Input: Respiratory Disease

The greatest share of key informants taking part in an online survey characterized Respiratory Disease as a “moderate problem” in the community.

Perceptions of Respiratory Disease as a Problem in the Community
(Among Key Informants; Total Area, 2023)

- Major Problem: 10.0%
- Moderate Problem: 60.0%
- Minor Problem: 28.3%
- No Problem At All: 1.7%

Sources: 2023 PBC Online Key Informant Survey, PBC, Inc.
Notes: Asked of all respondents.

Among those rating this issue as a “major problem,” reasons related to the following:

Access to Care/Services

- Asthma and COPD in children and adults with limited access to healthcare. – Physician (Peach County)
Injury & Violence

About Injury & Violence

INJURY► In the United States, unintentional injuries are the leading cause of death in children, adolescents, and adults younger than 45 years. ...Many unintentional injuries are caused by motor vehicle crashes and falls, and many intentional injuries involve gun violence and physical assaults. Interventions to prevent different types of injuries are key to keeping people safe in their homes, workplaces, and communities.

Drug overdoses are now the leading cause of injury deaths in the United States, and most overdoses involve opioids. Interventions to change health care providers’ prescribing behaviors, distribute naloxone to reverse overdoses, and provide medications for addiction treatment for people with opioid use disorder can help reduce overdose deaths involving opioids.

VIOLENCE► Almost 20,000 people die from homicide every year in the United States, and many more people are injured by violence. ...Many people in the United States experience physical assaults, sexual violence, and gun-related injuries. Adolescents are especially at risk for experiencing violence. Interventions to reduce violence are needed to keep people safe in their homes, schools, workplaces, and communities.

Children who experience violence are at risk for long-term physical, behavioral, and mental health problems. Strategies to protect children from violence can help improve their health and well-being later in life.

– Healthy People 2030 (https://health.gov/healthypeople)

Unintentional Injury

Age-Adjusted Unintentional Injury Deaths

Between 2018 and 2020, there was an annual average age-adjusted unintentional injury mortality rate of 46.4 deaths per 100,000 population in the Total Area.

Disparity ► Highest in Peach County. By race, much higher in the White community.

**Sources:**
- Federal Bureau of Investigation, FBI Uniform Crime Reports (UCR).

**Notes:**
- This indicator reports the rate of violent crime offenses reported by the sheriff's office or county police department per 100,000 residents. Violent crime includes homicide, forcible rape, robbery, and aggravated assault.
- Participation by law enforcement agencies in the UCR program is voluntary. Some data do not necessarily represent an exhaustive list of crimes due to gaps in reporting. Also, some institutions of higher education have their own police departments, which handle offenses occurring within campus grounds; these offenses are not included in the violent crime statistics but can be obtained from the Uniform Crime Reports Universities and Colleges data tables.

**Community Violence**

A total of 6.5% of surveyed adults acknowledge being the victim of a violent crime in the area in the past five years.

- **Trend** ► Denotes a statistically significant increase since 2012.

- **Disparity** ► Lowest in Peach County. The prevalence correlates with age and income and is reported more often among Hispanic respondents, those of Diverse Races, and LGBTQ+ respondents.

Key Informant Input: Injury & Violence

The largest share of key informants taking part in an online survey characterized Injury & Violence as a “major problem” in the community.

Perceptions of Injury & Violence as a Problem in the Community (Among Key Informants: Total Area, 2023)

- Major Problem: 54.1%
- Moderate Problem: 32.8%
- Minor Problem: 11.5%
- No Problem At All: 1.6%

Sources: 2023 PBC Community Health Survey, PBC, Inc. [Item 33]
Notes: Asked of all respondents.

Among those rating this issue as a “major problem,” reasons related to the following:

Gun Violence

- The number of people murdered in Macon; gunshots are frequently heard. Limited gun laws. – Social Services Provider (Bibb County)
- Drive by shootings, domestic violence, car accidents. – Community Leader (Baldwin County)
- I have witnessed a rise in aggressive behavior and gun violence. – Health Provider (Baldwin County)
There are lots of drive by shootings and gun violence, particularly on the Southside of Baldwin County. – Public Health Representative (Baldwin County)

The number of gun shootings. – Social Services Provider (Bibb County)

Number of incidents of people using guns to injure or kill others. Mental health, stress, and anxiety where people act out violently or in inappropriate ways. Loss of connection with family, values, culture or norms or no sense of higher power. Exposure to violence as an acceptable way of life. – Social Services Provider (Bibb County)

Primary concern at this time is gun violence. This is followed up with homicide - gun or otherwise. Then we have the concerns with suicide in our younger population (teens, pre-teens). To the community it seems that violence has become a way to solve problems and that causes real concern. – Social Services Provider (Bibb County)

Gun violence is a significant issue, with young people in particular. – Social Services Provider (Bibb County)

Increased gun violence incidents in the community. – Physician (Peach County)

Teen shooting deaths are on the rise in Bibb County. – Community Leader (Bibb County)

Frequent shootings and pedestrian versus car accidents. – Physician (Bibb County)

Incidence/Prevalence

Injury and violence in Peach County are definitely a problem due to the number of deaths, even among youth, per the news. – Community Leader (Peach County)

Major crime rate. – Community Leader (Bibb County)

Police Departments and Sherriff's Departments report an increase in violent crimes. – Public Health Representative (Houston County)

The abnormally high frequency per capita of violent crime. – Community Leader (Peach County)

Due to the rise in crime and violence, our community is seeing an uptick in injuries due to violence. This is a major problem due to the hospital being overfilled with routine patients, which causes long wait times to be seen by a medical doctor. – Community Leader (Baldwin County)

In the news every day, plus I see it during working hours. – Community Leader (Bibb County)

The number of violent crimes in our community is on the rise. The safety of all community members should be a priority. – Social Services Provider (Bibb County)

Homicide

Homicides and murders specifically increase year after year. – Community Leader (Bibb County)

Increasing number of homicides in Bibb County. High number of pedestrian accidents. – Physician (Bibb County)

Alcohol/Drug Use

A lot of drunk drivers in this community cause a lot of death and injury. We have a lot of young people shooting and killing each other almost weekly here. – Social Services Provider (Baldwin County)

Parental Influence

Injury and violence are a major problem in Baldwin County because of absent fathers and a lack of moral education either from the family, school, or the community. – Community Leader (Baldwin County)

Awareness/Education

The crime rate is increasing in the Baldwin County area, and we need more educational resources to help educate our young generation about safety and gang violence. – Community Leader (Baldwin County)

Employment

Jobs. – Community Leader (Baldwin County)

Gang Violence

Gang activity, limited sidewalks, and crosswalks in busy areas. – Health Provider (Bibb County)

Social Services

Challenged social services. – Physician (Bibb County)
Diabetes

About Diabetes

More than 30 million people in the United States have diabetes, and it’s the seventh leading cause of death. ...Some racial/ethnic minorities are more likely to have diabetes. And many people with diabetes don’t know they have it.

Poorly controlled or untreated diabetes can lead to leg or foot amputations, vision loss, and kidney damage. But interventions to help people manage diabetes can help reduce the risk of complications. In addition, strategies to help people who don’t have diabetes eat healthier, get physical activity, and lose weight can help prevent new cases.

– Healthy People 2030 (https://health.gov/healthypeople)

Age-Adjusted Diabetes Deaths

Between 2018 and 2020, there was an annual average age-adjusted diabetes mortality rate of 21.9 deaths per 100,000 population in the Total Area.

Disparity ► Highest in Peach and Baldwin counties. By race, much higher among Black residents.

- Excludes gestational diabetes (occurring only during pregnancy).
Age-Adjusted Kidney Disease Deaths

About Kidney Disease & Diabetes

Chronic kidney disease (CKD) is common in people with diabetes. Approximately one in three adults with diabetes has CKD. Both type 1 and type 2 diabetes can cause kidney disease. CKD often develops slowly and with few symptoms. Many people don’t realize they have CKD until it’s advanced and they need dialysis (a treatment that filters the blood) or a kidney transplant to survive.

- Centers for Disease Control and Prevention (CDC)

Between 2018 and 2020, there was an annual average age-adjusted kidney disease mortality rate of 27.0 deaths per 100,000 population in the Total Area.

Benchmark ► Higher than the Georgia and US rates.

Trend ► Increasing over the past decade.

Disparity ► Rates are lowest in Baldwin County and the Other Counties area. By race, the mortality rate is much higher among Black residents.

Key Informant Input: Diabetes

Two in three key informants taking part in an online survey characterized Diabetes as a “major problem” in the community.

Perceptions of Diabetes as a Problem in the Community
(Among Key Informants; Total Area, 2023)

- Major Problem 66.1%
- Moderate Problem 22.0%
- Minor Problem 10.2%
- No Problem At All 1.7%

Sources: 2023 PHC Online Key Informant Survey, PHC, Inc.
Notes: Asked of all respondents

Among those rating this issue as a “major problem,” reasons related to the following:

Affordable Medications/Supplies

Access to medications, education, and poor choice of healthy food options. – Physician (Baldwin County)
There is a large portion of the population in this area that are diabetic. These individuals require medication and constant monitoring of blood sugar levels. Access to medication and proper treatment has been an issue along with not obtaining proper monitoring devices. – Community Leader (Peach County)
Getting insulin and taking it as scheduled. – Physician (Bibb County)
Cost of insulin and monitoring devices, unhealthy eating habits. – Social Services Provider (Bibb County)
Difficulty in paying for medications and lack of education on diet planning and exercise. – Physician (Bibb County)
Getting medication for diabetes or seeing a physician. – Community Leader (Bibb County)

Awareness/Education

Education and access to primary care. Societal dietary habits. – Health Provider (Houston County)
Understanding their disease and being able to afford some of the treatments. – Social Services Provider (Bibb County)
There is little communication on the subject in this community. – Community Leader (Peach County)
Education and support for learning how to manage and prevent complications. – Social Services Provider (Bibb County)
Lack of education about the causes and how to manage the disease. – Social Services Provider (Bibb County)
Not understanding the long-term effects of diabetes and failure to properly take medications. – Community Leader (Monroe County)

Access to Affordable Healthy Food

Crawford County does not have a grocery store, and people have limited access to fruits and vegetables and good foods. – Public Health Representative (Crawford County)
We are in a food desert. Access to wholesome food choices. Lack of structured exercise groups or programs. – Physician (Crawford County)
Only one provider of fresh produce in the county, the Piggly Wiggly in Jeffersonville. – Public Health Representative (Twiggs County)
Access to healthy foods, such as food deserts. Access to healthcare. Healthcare literacy. – Social Services Provider (Bibb County)
Access to proper diet and exercise. – Community Leader (Bibb County)

Disease Management

Following the treatment plan daily. – Health Provider (Bibb County)
Community Health Needs Assessment

Uncontrolled diabetes due to poor management and adherence to medications. The need for lifestyle diabetes management, particularly in the area of nutrition and physical activity. Diabetes self-management classes would be great. – Public Health Representative (Baldwin County)

Diabetes self-management, Cost of medications. Disparity of ophthalmologists for retinal screenings and pre-diabetes awareness. – Physician (Bibb County)

Compliance with lifestyle changes is needed, and education. – Health Provider (Bibb County)

Access to Care/Services

Access to quality care. Huge need for additional endocrinology providers. Nutritional disparities and educational disparities. – Physician (Bibb County)

Access to care to an endocrinologist, regular education and monitoring, screening for pre-diabetes. – Community Leader (Peach County)

Access to health care, medications, and fresh food. – Physician (Peach County)

Affordable Care/Services

Access to care and education at an affordable rate. – Community Leader (Bibb County)

Access to affordable care, transportation that is reliable and affordable to take them to their appointments, lack of access to affordable medications, the expense of healthy foods and access to healthy foods, and the food culture. – Public Health Representative (Houston County)

No free nutrition classes or support groups for community members that are not inpatient status. If there are, it is not well advertised. – Public Health Representative (Baldwin County)

Lifestyle

Obesity and lack of exercise. – Community Leader (Baldwin County)

Modifying lifestyle, diet education, and access to care. – Physician (Bibb County)

Lifestyle choices. – Social Services Provider (Bibb County)

Nutrition

Bad eating habits, such as eating too much fried foods, junk foods, etc. – Community Leader (Bibb County)

Poor eating habits, environmental and generation concerns, and lack of choices. – Community Leader (Peach County)

Diagnosis/Treatment

Citizens need an earlier diagnosis. Dietary discipline. – Health Provider (Baldwin County)

Income/Poverty

A low socio-economic stratum and low educational attainment seem to make the management of chronic conditions problematic. – Community Leader (Peach County)

Insurance Issues

Healthcare insurance. – Community Leader (Baldwin County)

Prevention/Screenings

Prevention, pre-diabetes education, early detection. – Community Leader (Bibb County)
Disabling Conditions

Multiple Chronic Conditions

Among Total Area survey respondents, most report having at least one chronic health condition.

Number of Chronic Conditions (Total Area, 2023)

- None: 18.2%
- One: 20.2%
- Two: 19.1%
- Three/More: 42.5%

In fact, 42.5% of Total Area adults report having three or more chronic conditions.

Benchmark ➤ Higher than the US prevalence.

Disparity ➤ Reported more often among women and adults age 40 and older.

Have Three or More Chronic Conditions

Total Area

Sources: ❖ 2023 PRC Community Health Survey, PRC, Inc. [Item 107]
Notes: ❖ 2023 PRC National Health Survey, PRC, Inc.
❖ In this case, chronic conditions include asthma, cancer, chronic pain, diabetes, diagnosed depression, heart disease, high blood cholesterol, high blood pressure, lung disease, obesity, and stroke.
Activity Limitations

About Disability & Health

Studies have found that people with disabilities are less likely to get preventive health care services they need to stay healthy. Strategies to make health care more affordable for people with disabilities are key to improving their health.

In addition, people with disabilities may have trouble finding a job, going to school, or getting around outside their homes. And they may experience daily stress related to these challenges. Efforts to make homes, schools, workplaces, and public places easier to access can help improve quality of life and overall well-being for people with disabilities.

- Healthy People 2030 (https://health.gov/healthypeople)

A total of 28.6% of Total Area adults are limited in some way in some activities due to a physical, mental, or emotional problem.

Trend ► Increasing significantly from earlier findings.

Disparity ► Highest in Baldwin County. Reported more often among women, adults age 40 and 64, those in low-income households, and LGBTQ+ adults.
Limited in Activities in Some Way
Due to a Physical, Mental, or Emotional Problem

Most common conditions:
- Back/neck problems
- Mental health
- Arthritis
- Difficulty walking
- Bone/joint injury

## Key Informant Input: Disability & Chronic Pain

Key informants taking part in an online survey most often characterized *Disability & Chronic Pain* as a “moderate problem” in the community.

### Perceptions of Disability & Chronic Pain as a Problem in the Community
(Among Key Informants; Total Area, 2023)

<table>
<thead>
<tr>
<th>Major Problem</th>
<th>Moderate Problem</th>
<th>Minor Problem</th>
<th>No Problem At All</th>
</tr>
</thead>
<tbody>
<tr>
<td>26.7%</td>
<td>53.3%</td>
<td>18.3%</td>
<td>1.7%</td>
</tr>
</tbody>
</table>

Source: 50205 PHC Online Key Informant Survey, PHC, Inc
Notes: Asked of all respondents.

Among those rating this issue as a “major problem,” reasons related to the following:

### Access to Care/Services

- Limited access to health care and community agencies to provide support to families. – Physician (Peach County)
- Lack of access to care, including physical therapy. – Physician (Bibb County)
- Your chronic pain facilities are mostly located outside of the Milledgeville Baldwin County area. The one facility located here in this area has limited time frames for patient caseload. Please keep in mind that chronic pain management also is limited in our area due to those who are more addicted to drugs, and they miss using the help. I believe that we need more affordable short-term disability services for the aging and disabled. However, most families are choosing to keep their loved ones in their own homes versus a facility. – Community Leader (Baldwin County)

### Follow Up/Support

- I see it everyday working with the homeless and working poor. Many times, there isn’t a place for respite following a hospital stay. People are staying on the street. Very limited opportunities for a place to lay one's head at night and feel safe and secure. The aging population of the homeless and very poor is significant and growing. – Community Leader (Bibb County)
- Specifically, dementia is a major issue. There needs to be more support for caregivers and affordable care facilities for patients. There seems to be more awareness of the disease, but education is lacking. – Social Services Provider (Bibb County)

### Incidence/Prevalence

- Anecdotal stories. – Social Services Provider (Houston County)
- Just my take from talking to so many people throughout the community. So many knee, hip and joint problems and pain. Chronic pain from accidents. – Community Leader (Baldwin County)

### Income/Poverty

- Again, the low socio-economic stratum, low educational attainment, and inability or unwillingness to access appropriate healthcare resource turns many of the chronic conditions into disabling conditions. – Community Leader (Peach County)
- People aging on a fixed income and in communities riddled with violence increase stress and reduces the opportunity for physical activity. – Public Health Representative (Baldwin County)
Co-Occurrences

Some of these disabilities are related to major health issues like diabetes. For example, lower limb amputations, end stage renal disease, vision loss. These prevent people from living a full life. It also affects their ability to do meaningful work and build wealth. They then need family caregivers, so this has a multigenerational impact on economic status.

We have a very high rate of disability in Macon-Bibb. – Social Services Provider (Bibb County)

Nutrition

Rural areas especially suffer when they are in food and medical care deserts. Jeffersonville and Twiggs County are no exception. Illnesses that are easily treatable through routine medical care often become chronic issues due to the lack of resources. – Public Health Representative (Twiggs County)

Prevention/Screenings

First, we do not do a good job in prevention, and then services are not available due to disparities. – Physician (Bibb County)

Alzheimer’s Disease

About Dementia

Alzheimer’s disease is the most common cause of dementia. Nearly 6 million people in the United States have Alzheimer’s, and that number will increase as the population ages.

Dementia refers to a group of symptoms that cause problems with memory, thinking, and behavior. People with dementia are more likely to be hospitalized, and dementia is linked to high health care costs.

While there’s no cure for Alzheimer’s disease, early diagnosis and supportive care can improve quality of life. And efforts to make sure adults with symptoms of cognitive decline — including memory loss — are diagnosed early can help improve health outcomes in people with dementia. Interventions to address caregiving needs can also help improve health and well-being in people with dementia.

– Healthy People 2030 (https://health.gov/healthypeople)

Age-Adjusted Alzheimer’s Disease Deaths

Between 2018 and 2020, there was an annual average age-adjusted Alzheimer’s disease mortality rate of 41.0 deaths per 100,000 population in the Total Area.

Benchmark ▶ Worse than the US mortality rate.
Trend ▶ Increasing over the past decade.
Disparity ▶ Highest in Houston and Peach counties. By race, higher among White residents.

Births
Prenatal Care

About Infant Health

Keeping infants healthy starts with making sure women get high-quality care during pregnancy and improving women’s health in general. After birth, strategies that focus on increasing breastfeeding rates and promoting vaccinations and developmental screenings are key to improving infants’ health. Interventions that encourage safe sleep practices and correct use of car seats can also help keep infants safe.

The infant mortality rate in the United States is higher than in other high-income countries, and there are major disparities by race/ethnicity. Addressing social determinants of health is critical for reducing these disparities.

- Healthy People 2030 (https://health.gov/healthypeople)

In 2019, 5.3% of all Total Area births did not receive prenatal care in the first six months of pregnancy.

Benchmark ► Lower than the Georgia and US percentages.

Disparity ► The prevalence has increased from baseline reports.

Lack of Prenatal Care in the First Six Months of Pregnancy
(Percentage of Live Births, 2019)

Note:  ● This indicator reports the percentage of women who do not obtain prenatal care before their seventh month of pregnancy (if at all).

Birth Outcomes & Risks

Low-Weight Births

A total of 11.2% of 2014-2020 Total Area births were low-weight.

Benchmark ▶ Higher than the US percentage.

Disparity ▶ Higher in Bibb County.

Low-Weight Births
(Percent of Live Births, 2014-2020)

Family Planning

About Family Planning

Nearly half of pregnancies in the United States are unintended, and unintended pregnancy is linked to many negative outcomes for both women and infants. Unintended pregnancy is linked to outcomes like preterm birth and postpartum depression. Interventions to increase use of birth control are critical for preventing unintended pregnancies. Birth control and family planning services can also help increase the length of time between pregnancies, which can improve health for women and their infants.

Adolescents are at especially high risk for unintended pregnancy. Although teen pregnancy and birth rates have gone down in recent years, close to 200,000 babies are born to teen mothers every year in the United States. Linking adolescents to youth-friendly health care services can help prevent pregnancy and sexually transmitted infections in this age group.

Healthy People 2030 (https://health.gov/healthypeople)

Births to Adolescent Mothers

Between 2014 and 2020, there were 25.6 births to adolescents age 15 to 19 per 1,000 women age 15 to 19 in Total Area.

Benchmark ► Higher than the national rate.

Disparity ► Highest in Bibb and Houston counties. Much higher among Black and Hispanic teens.

Teen Birth Rate

(Births to Adolescents Age 15-19 per 1,000 Females Age 15-19, 2014-2020)

Source: ► Centers for Disease Control and Prevention. National Vital Statistics System

Sources: 2023 PRC Online Key Informant Survey, PRC, Inc.
Notes: Asked of all respondents.

Among those rating this issue as a “major problem,” reasons related to the following:

**Lack of Providers**

- There are not enough women providers for women’s health and access to reproductive choice care is limited. – Community Leader (Bibb County)
- Scarcity of primary care doctors, compounded by the percentage of individuals that are uninsured or underinsured. – Health Provider (Baldwin County)
Infertility and fertility preservation care. Over 15% of US population and 30-40% of sub-population of middle Georgia have infertility issue. There is no board-certified REI (reproductive endocrinologist & infertility) doctor practicing in Macon. Disparities in access to infertility care represent marked injustices in US health care. There is a need for fertility preservation services for individuals who undergo a medically necessary procedure. – Physician (Bibb County)

Access to Care/Services

Infant and maternal mortality in our state is one of the highest in the county. Access to women’s health with an OB/GYN has not been in Peach County for years. – Community Leader (Peach County)

Access to care and educational resources. – Physician (Bibb County)

Incidence/Prevalence

Georgia received a failing grade on recent health rankings for infant and maternal health. – Public Health Representative (Houston County)

Statistics speak for themselves, although we have improved. – Physician (Bibb County)

Teen Parents

I think we have too many teen or young adult parents that do not have access to proper health care and family planning. Lack of parenting programs. – Social Services Provider (Bibb County)

Single-Parent Households

Baldwin County in a recent survey had the highest rate of child births to unwed mothers in the entire state of Georgia. – Community Leader (Baldwin County)

Diagnosis/Treatment

Lack of prenatal care, lack of use of contraceptives, teenage parents or grandparents raising multiple generations. – Health Provider (Bibb County)

Income/Poverty

Poverty. Poor infant and mother support. – Community Leader (Baldwin County)

Awareness/Education

Lack of information and services. – Community Leader (Baldwin County)

Infant Mortality

Infant deaths and maternal deaths, and poverty. – Social Services Provider (Bibb County)
Modifiable Health Risks
Nutrition

About Nutrition & Healthy Eating

Many people in the United States don’t eat a healthy diet. ...People who eat too many unhealthy foods — like foods high in saturated fat and added sugars — are at increased risk for obesity, heart disease, type 2 diabetes, and other health problems. Strategies and interventions to help people choose healthy foods can help reduce their risk of chronic diseases and improve their overall health.

Some people don’t have the information they need to choose healthy foods. Other people don’t have access to healthy foods or can’t afford to buy enough food. Public health interventions that focus on helping everyone get healthy foods are key to reducing food insecurity and hunger and improving health.

– Healthy People 2030 (https://health.gov/healthypeople)

Difficulty Accessing Fresh Produce

Most Total Area adults report little or no difficulty buying fresh produce at a price they can afford.

Level of Difficulty Finding Fresh Produce at an Affordable Price (Total Area, 2023)

- Very Difficult: 7.3%
- Somewhat Difficult: 21.4%
- Not Too Difficult: 45.6%
- Not At All Difficult: 25.7%

Sources: 2023 PRC Community Health Survey, PRC, Inc. [Item 66]
Notes: Asked of all respondents

RELATED ISSUE
See also Food Access in the Social Determinants of Health section of this report.
However, 28.7% of Total Area adults find it “very” or “somewhat” difficult to access affordable fresh fruits and vegetables.

**Trend** ► Increasing significantly from previous findings.

**Disparity** ► Highest in Baldwin County and the Other Counties area. The prevalence decreases with age and income level and is reported more often among women, Hispanic respondents, people of Diverse Races, and LGBTQ+ adults.

Physical Activity

About Physical Activity

Physical activity can help prevent disease, disability, injury, and premature death. The Physical Activity Guidelines for Americans lays out how much physical activity children, adolescents, and adults need to get health benefits. Although most people don’t get the recommended amount of physical activity, it can be especially hard for older adults and people with chronic diseases or disabilities.

Strategies that make it safer and easier to get active — like providing access to community facilities and programs — can help people get more physical activity. Strategies to promote physical activity at home, at school, and at childcare centers can also increase activity in children and adolescents.

- Healthy People 2030 (https://health.gov/healthypeople)

Leisure-Time Physical Activity

A total of 31.2% of Total Area adults report no leisure-time physical activity in the past month.

Benchmark ► Higher than the Georgia figure. Fails to satisfy the Healthy People 2030 objective.

Trend ► A statistically significant decrease from 2012 findings (but increasing since 2015).

Disparity ► Highest in the Other Counties area.

No Leisure-Time Physical Activity in the Past Month
Healthy People 2030 = 21.8% or Lower

Notes:
- Asked of all respondents.
Activity Levels

Adults

Adults: Recommended Levels of Physical Activity

For adults, “meeting physical activity recommendations” includes adequate levels of both aerobic and strengthening activities:

- **Aerobic activity** is one of the following: at least 150 minutes per week of light to moderate activity (such as walking), 75 minutes per week of vigorous activity (such as jogging), or an equivalent combination of both.
- **Strengthening activity** is at least two sessions per week of exercise designed to strengthen muscles (such as push-ups, sit-ups, or activities using resistance bands or weights).

A total of 23.9% of Total Area adults regularly participate in adequate levels of both aerobic and strengthening activities (meeting physical activity recommendations).

**Benchmark** ► Lower than the US figure. Fails to satisfy the Healthy People 2030 objective.

**Disparity** ► Lowest in the Other Counties area. Reported less often among women, older adults, those living on lower incomes, and respondents who identify as White, Black, or of Diverse Races.

**Meets Physical Activity Recommendations**
Healthy People 2030 = 29.7% or Higher

Total Area

**Source:**
- 2017 PRF Community Health Survey, PRF, Inc. [Here HT]
- 2017 PRF National Health Survey. PRF, Inc.

**Notes:**
- Asked of all respondents.
- Meeting both guidelines is defined as the number of persons age 18+ who report light or moderate aerobic activity for at least 150 minutes per week or who report vigorous physical activity ≥ minutes per week (or an equivalent combination of moderate and vigorous-intensity activity, gat who also report doing physical activities specifically designed to strengthen muscles at least twice per week.
Meets Physical Activity Recommendations
(Total Area, 2023)
Healthy People 2030 = 29.7% or Higher

Children

Children: Recommended Levels of Physical Activity
Children and adolescents should do 60 minutes (1 hour) or more of physical activity each day.
www.cdc.gov/physicalactivity

Among Total Area children age 2 to 17, 44.3% are reported to have had 60 minutes of physical activity on each of the seven days preceding the interview (1+ hours per day).

Benchmark ▶ Higher than the US percentage.

Trend ▶ Decreasing significantly since 2015 (similar to more recent years).

Disparity ▶ Lowest among Houston County children. The percentage decreases with child’s age and is lower among girls than boys.

Examples include athletic clubs, gymnasia, dance centers, tennis clubs, and swimming pools.
Weight Status

About Overweight & Obesity

Obesity is linked to many serious health problems, including type 2 diabetes, heart disease, stroke, and some types of cancer. Some racial/ethnic groups are more likely to have obesity, which increases their risk of chronic diseases.

Culturally appropriate programs and policies that help people eat nutritious foods within their calorie needs can reduce overweight and obesity. Public health interventions that make it easier for people to be more physically active can also help them maintain a healthy weight.

- Healthy People 2030 (https://health.gov/healthypeople)

Body Mass Index (BMI), which describes relative weight for height, is significantly correlated with total body fat content. The BMI should be used to assess overweight and obesity and to monitor changes in body weight. In addition, measurements of body weight alone can be used to determine efficacy of weight loss therapy. BMI is calculated as weight (kg)/height squared (m²). To estimate BMI using pounds and inches, use: [weight (pounds)/height squared (inches²)] x 703.

In this report, overweight is defined as a BMI of 25.0 to 29.9 kg/m² and obesity as a BMI ≥30 kg/m². The rationale behind these definitions is based on epidemiological data that show increases in mortality with BMIs above 25 kg/m². The increase in mortality, however, tends to be modest until a BMI of 30 kg/m² is reached. For persons with a BMI ≥30 kg/m², mortality rates from all causes, and especially from cardiovascular disease, are generally increased by 50 to 100 percent above that of persons with BMIs in the range of 20 to 25 kg/m².

Overweight Status

Most Total Area adults (72.5%) are overweight.

Benchmark ➤ Well above the Georgia and US percentages.

Prevalence of Total Overweight (Overweight and Obese)

The overweight prevalence above includes 42.5% of Total Area adults who are obese.

Benchmark ➤ Worse than Georgia and US percentages. Fails to satisfy the Healthy People 2030 objective.

Trend ➤ Increasing significantly since 2012.

Disparity ➤ Obesity is most prevalent in Peach County. Highest among women, adults age 40 to 64, and Black adults.

Prevalence of Obesity
Healthy People 2030 = 36.0% or Lower
Prevalence of Obesity
(Total Area, 2023)
Healthy People 2030 = 36.0% or Lower

Sources:  
1. 2023 PBC Community Health Survey. PBC, Inc. [Item 112]

Notes:  
1. Based on reported heights and weights, asked of all respondents.
2. The definition of obesity is having a body mass index (BMI), a ratio of weight to height (kilograms divided by meters squared), greater than or equal to 30.0, regardless of gender.

Relationship of Overweight With Other Health Issues

Overweight and obese adults are more likely to report a number of adverse health conditions, as outlined in the following chart.

Sources:  
1. 2023 PBC Community Health Survey. PBC, Inc. [Item 112]

Notes:  
Based on reported heights and weights, asked of all respondents.
Children’s Weight Status

About Weight Status In Children & Teens

In children and teens, body mass index (BMI) is used to assess weight status – underweight, healthy weight, overweight, or obese. After BMI is calculated for children and teens, the BMI number is plotted on the CDC BMI-for-age growth charts (for either girls or boys) to obtain a percentile ranking. Percentiles are the most commonly used indicator to assess the size and growth patterns of individual children in the United States. The percentile indicates the relative position of the child’s BMI number among children of the same sex and age.

BMI-for-age weight status categories and the corresponding percentiles are shown below:

- Underweight <5th percentile
- Healthy Weight 5th and <85th percentile
- Overweight ≥85th and <95th percentile
- Obese ≥95th percentile

– Centers for Disease Control and Prevention

Based on the heights/weights reported by surveyed parents, 40.4% of Total Area children age 5 to 17 are overweight or obese (≥85th percentile).

Benchmark ► Worse than the national figure.

Trend ► Increasing significantly from 2012 findings.

Prevalence of Overweight in Children (Children 5-17)

![Graph showing prevalence of overweight in children]

Total Area

Total Area: 25.9%, 19.5%

**Key Informant Input:**
**Nutrition, Physical Activity & Weight**

Key informants taking part in an online survey most often characterized *Nutrition, Physical Activity & Weight* as a “major problem” in the community.

**Perceptions of Nutrition, Physical Activity & Weight**
as a Problem in the Community
(Among Key Informants; Total Area, 2023)

- **Major Problem**: 57.4%
- **Moderate Problem**: 32.8%
- **Minor Problem**: 8.2%
- **No Problem At All**: 1.6%

Sources: 2023 PHC Online Key Informant Survey, PHC, Inc.
Notes: Asked of all respondents.
Among those rating this issue as a “major problem,” reasons related to the following:

**Lifestyle**

- Lifestyle and nutrition education, cause and effect. Access to fresh fruits and vegetables. Affordable restaurant food is very fat heavy. – Social Services Provider (Bibb County)
- Getting people motivated and focused on self-reliance. – Community Leader (Bibb County)
- Obesity is an existential crisis both in the youth and adult population. – Public Health Representative (Baldwin County)
- Community engagement and active buy-in. This is not the same as education. This is not primarily a food or facilities access problem. More farmer’s markets or parks are not meaningful solutions. – Community Leader (Bibb County)
- We do have some areas of the county that are in food deserts. We need to offer more outdoor recreational activities, including providing safer streets and roads so people can walk, jog or bike to work, and other activities. – Community Leader (Baldwin County)
- Poor eating habits. Lack of home cooked meals, lack of daily exercise. – Community Leader (Baldwin County)
- Due to lack of income, many individuals eat fast food or unhealthy meals. Many children do not include physical activity in their daily routines due to being in the home on electronic devices. The young community does not understand or be educated about obesity. – Community Leader (Bibb County)
- Lack of regular exercise and over consumption of poorly nutritional, highly caloric foods. – Physician (Bibb County)
- Laziness, secondary to a sedentary lifestyle with our phones, computers, televisions, and fast food. – Public Health Representative (Baldwin County)
- Non-willingness to participate and cost and timing to prepare. – Physician (Bibb County)
- Too many fast-food establishments, which is all that many of our citizens can afford. Not enough, or in some cases no affordable exercise facilities. No public pool. – Social Services Provider (Baldwin County)
- Processed food, sedentary lifestyle, high cost of healthy food compared to processed food. Lack of knowledge of how to meal plan and prep. Busy lifestyles, so they rely on drive through meals. – Health Provider (Bibb County)
- An overabundance of fast-food restaurants, convenience stores, and limited access to walking trails or other recreational activities. – Community Leader (Peach County)

**Access to Affordable Healthy Food**

- Access to healthy food, phones, televisions, and jobs that are desk bound. – Social Services Provider (Bibb County)
- Access to fresh food and weight loss medication. – Physician (Peach County)
- No healthy food options, lack of access to dieticians. – Physician (Baldwin County)
- Access to healthy foods and physical green space for exercise is lacking in Baldwin County. Full-service groceries stores are out of the reach of most of the population on fixed income, without transportation and on marginalized population. Convenience stores are the primary source of food and they often do not provide access to fresh fruits and vegetables or a wide variety of healthy options. – Public Health Representative (Baldwin County)
- Access to affordable healthy food, access to safe public spaces, such as parks and gyms, time to cook and availability of healthy choices versus fast food. – Community Leader (Bibb County)
- Access to affordable healthy food education about how to use lower cost food to prepare family meals, such as beans, lentils, and vegetables. Safe places to exercise outdoors. – Social Services Provider (Bibb County)
- Food desert. – Community Leader (Baldwin County)
- Crawford County is eating from what's available in this town. Most food is pre-packaged, processed foods from DG or Family Dollar. Physical activity is a choice and there are no barriers in this town. The park is open for running and walking daily. The river is nearby for any activities one would desire. – Public Health Representative (Crawford County)

**Awareness/Education**

- Lack of knowledge that bad choices in nutrition, coupled with no or little physical activity, create weight problems. – Community Leader (Baldwin County)
- Lack of clarity with connecting the dots around these lifestyle issues significantly impacts other health concerns. Limited funding to help and support the underprivileged with getting support services around these fundamental quality of life issues. – Community Leader (Bibb County)
- Lack of general health education and economic disparities. – Physician (Bibb County)
- Lack of educational resources and programs that target these issues. – Physician (Bibb County)
Income/Poverty

Peach County has the highest poverty and low-income rates, obesity, and few public physical activities in the NCHD and Georgia, per the 2022 NCHD health assessment. There is a high rate of free lunch and SNAP program recipients. – Community Leader (Peach County)

Poverty. – Community Leader (Baldwin County)

Childhood Obesity

The Healthy Weight Family Program is needed to address specifically childhood obesity in the family. The NCHD health assessment did not specify childhood obesity by county. – Community Leader (Peach County)

Affordable Care/Services

Access to affordable healthcare. – Health Provider (Baldwin County)

Cultural/Personal Beliefs

Cultural biases and lack of knowledge regarding healthy food choices. – Health Provider (Baldwin County)
Substance Use

About Drug & Alcohol Use
Substance use disorders can involve illicit drugs, prescription drugs, or alcohol. Opioid use disorders have become especially problematic in recent years. Substance use disorders are linked to many health problems, and overdoses can lead to emergency department visits and deaths.

Effective treatments for substance use disorders are available, but very few people get the treatment they need. Strategies to prevent substance use — especially in adolescents — and help people get treatment can reduce drug and alcohol misuse, related health problems, and deaths.

– Healthy People 2030 (https://health.gov/healthypeople)

Alcohol Use

Age-Adjusted Alcohol-Induced Deaths
Between 2018 and 2020, the Total Area reported an annual average age-adjusted mortality rate of 7.3 alcohol-induced deaths per 100,000 population.

Benchmark ► Lower than the Georgia and US mortality rates.

Trend ► Though fluctuating over time, increasing from baseline reports.

Disparity ► Much higher among White residents than Black residents in the Total Area.

Excessive Drinking

Excessive drinking includes heavy and/or binge drinkers:

- **Heavy Drinking**: men reporting 2+ alcoholic drinks per day or women reporting 1+ alcoholic drink per day in the month preceding the interview.
- **Binge Drinking**: men reporting 5+ alcoholic drinks or women reporting 4+ alcoholic drinks on any single occasion during the past month.

A total of 18.0% of area adults engage in excessive drinking (heavy and/or binge drinking).

**Benchmark**: Much lower than the national prevalence.

**Disparity**: Lowest in the combined Other Counties area. Strong correlation with age and reported more often among respondents of Diverse Races and LGBTQ+ respondents.

Drug Use

Age-Adjusted Unintentional Drug-Induced Deaths

Between 2018 and 2020, there was an annual average age-adjusted mortality rate of 8.9 unintentional drug-induced deaths per 100,000 population in the Total Area.

Benchmark ► Well below the state and (especially) national rates.

Disparity ► Lowest in Houston County. Much higher among White residents than Black residents.

Unintentional Drug-Induced Deaths: Age-Adjusted Mortality (2018-2020 Annual Average Deaths per 100,000 Population)

Unintentional Drug-Induced Deaths: Age-Adjusted Mortality by Race/Ethnicity (2018-2020 Annual Average Deaths per 100,000 Population; Total Area)

Sources: • CDC WONDER Online Query System, Centers for Disease Control and Prevention, Epidemiology Program Office, Division of Public Health Surveillance and Informatics. Data extracted June 2023.

Notes: • Deaths are coded using the Tenth Revision of the International Statistical Classification of Diseases and Related Health Problems (ICD-10).
• Rates are per 100,000 population, age-adjusted to the 2000 US Standard Population.

Community Health Needs Assessment

(Annual Average Deaths per 100,000 Population)

Illicit Drug Use
A total of 6.9% of Total Area adults acknowledge using an illicit drug in the past month.

Trend ▶ A statistically significant increase from 2012 findings.

Disparity ▶ The prevalence decreases with age and income and is reported more often among Hispanic respondents, respondents of Diverse Races, and LGBTQ+ adults.

Illicit Drug Use in the Past Month
Total Area

For the purposes of this survey, “illicit drug use” includes use of illegal substances or of prescription drugs taken without a physician’s order.
Note: As a self-reported measure – and because this indicator reflects potentially illegal behavior – it is reasonable to expect that it might be underreported, and that actual illicit drug use in the community is likely higher.

Sources: • CDC WONDER Online Query System, Centers for Disease Control and Prevention, Epidemiology Program Office, Division of Public Health Surveillance and Informatics. Data extracted June 2019.
Notes: • Deaths are coded using the Tenth Revision of the International Statistical Classification of Diseases and Related Health Problems (ICD-10).

Personal Impact From Substance Use

Most Total Area residents’ lives have not been negatively affected by substance use (either their own or someone else’s).

Degree to Which Life Has Been Negatively Affected by Substance Use (Self or Other’s)
(Total Area, 2023)

- Great Deal 10.1%
- Somewhat 13.5%
- Little 12.7%
- Not At All 63.7%

Surveyed adults were also asked to what degree their lives have been impacted by substance use (whether their own use or that of another).

However, 36.3% have felt a personal impact to some degree (“a little,” “somewhat,” or “a great deal”).

Benchmark ▶ Lower than the national prevalence.

Disparity ▶ Reported among half of Baldwin County respondents. The percentage decreases with age and household income level and is higher among adults of Diverse Races and LGBTQ+ respondents.

Life Has Been Negatively Affected by Substance Use (by Self or Someone Else)

2023 PBC Online Key Informant Survey, PBC, Inc.
Notes: 
* Asked of all respondents. 

Among those rating this issue as a “major problem,” reasons related to the following:

Access to Care/Services

- Lack of programs and a lack of desire from abusers to make the commitment to change. – Social Services Provider (Bibb County)
- Rehab center. – Community Leader (Baldwin County)
- Access to substance abuse and mental health care. Providers or places who have Narcan kits to prevent opioid deaths. – Community Leader (Peach County)
- Resources and facilities that offer assistance. – Health Provider (Baldwin County)
- Not enough facilities to help with the increasing problem. – Community Leader (Baldwin County)
- Lack of clinics and services. – Community Leader (Bibb County)
Access to long-term care. – Community Leader (Bibb County)
Getting people who need the care to a facility that can help them. – Community Leader (Bibb County)
There is a lack of substance abuse treatment facilities in our community. Those that are close are either full or just a revolving door. Those that are good treatment facilities stay full. – Community Leader (Monroe County)
Lack of mental health and long-term treatment programs and follow up. – Social Services Provider (Bibb County)
Lack of sufficient resources and programs. – Public Health Representative (Baldwin County)
Across the state of Georgia, we do not have ready accessible substance abuse treatment centers. – Community Leader (Baldwin County)

Awareness/Education
Lack of knowledge of where to go, afraid of getting in trouble. – Health Provider (Bibb County)
Lack of education. The program needs to be sustainably integrated in the community. – Public Health Representative (Baldwin County)
Lack of knowledge, income, and available resources in this community. – Community Leader (Bibb County)

Disease Management
Desire. The population does not see it as a problem. Must leave their job to access treatment and can’t leave their job. – Social Services Provider (Bibb County)
Those who are addicted must want to stop. If someone wants to stop, there are resources available. – Community Leader (Baldwin County)
No desire to get help and no place to go, few days there is no help. – Physician (Bibb County)

Incidence/Prevalence
Anecdotal stories. – Social Services Provider (Houston County)
Overdose calls in emergency services are at an all-time high. The introduction of fentanyl in our area has increased the frequency and severity of overdose incidents. – Community Leader (Peach County)

Law Enforcement
I think local law enforcement does not have the manpower to remove drug and gang activity in Baldwin County. I think the large amount of activity, along with only one well-known treatment facility being available inhibits access for help. – Social Services Provider (Baldwin County)

Denial/Stigma
One of the major barriers in my opinion is the stigma associated with River Edge, the major provider for substance abuse treatment in our area. – Social Services Provider (Bibb County)

Easy Access
Easy access to drugs in all communities. – Community Leader (Baldwin County)

Lack of Providers
The number of providers that provide treatment for substance abuse. – Physician (Peach County)

Access to Care for Uninsured/Underinsured
Number of programs and referrals for uninsured. – Physician (Bibb County)

Lifestyle
People just want to use drugs. – Public Health Representative (Crawford County)
Most Problematic Substances

Key informants (who rated this as a “major problem”) clearly identified alcohol as causing the most problems in the community, followed by methamphetamine/other amphetamines.

Tobacco Use

About Tobacco Use

Most deaths and diseases from tobacco use in the United States are caused by cigarettes. Smoking harms nearly every organ in the body and increases the risk of heart disease, stroke, lung diseases, and many types of cancer. Although smoking is widespread, it’s more common in certain groups, including men, American Indians/Alaska Natives, people with behavioral health conditions, LGBT people, and people with lower incomes and education levels.

Several evidence-based strategies can help prevent and reduce tobacco use and exposure to secondhand smoke. These include smoke-free policies, price increases, and health education campaigns that target large audiences. Methods like counseling and medication can also help people stop using tobacco.

− Healthy People 2030 (https://health.gov/healthypeople)

Cigarette Smoking

Prevalence of Cigarette Smoking

A total of 21.3% of Total Area adults currently smoke cigarettes, either regularly (every day) or occasionally (on some days).

Key Informant Input: Tobacco Use

The greatest share of key informants taking part in an online survey characterized Tobacco Use as a “moderate problem” in the community.

Perceptions of Tobacco Use as a Problem in the Community
(Among Key Informants; Total Area, 2023)

- Major Problem - Moderate Problem - Minor Problem - No Problem At All

30.0% 55.0% 13.3% 1.7%

Source: 2023 PHL Online Key Informant Survey. PHL Inc.
Notes: Asked of all respondents.

Among those rating this issue as a “major problem,” reasons related to the following:

Incidence/Prevalence

- 21% of the population of Peach County are smokers, per the NCHD health assessment. – Community Leader (Peach County)
- See it abused every day. – Community Leader (Bibb County)
- We have so many people who smoke. – Social Services Provider (Bibb County)
- Self-evident. – Physician (Bibb County)
- There is a high prevalence of smoking and data from the DPH, suggesting that the leading causes of death in the county are indirectly or directly linked to tobacco use or secondhand exposure to tobacco. – Public Health Representative (Baldwin County)

Impact on Quality of Life

- Number of people smoking, and development of diseases associated with tobacco use. – Physician (Peach County)
- Health issues. – Community Leader (Baldwin County)

Easy Access

- Tobacco is readily available in almost every store you go to today. The addition of vaping to tobacco use has only made it more “glamorous” to the younger generation. The long-term effects of smoking are not promoted as much as they should be. When people live in less than desirable conditions and have very little income, it is easy to turn to alcohol and tobacco as a means to cope with what is going on around you. – Community Leader (Monroe County)

Access to Care/Services

- Lack of resources for cessation and educational programs. Lack of access to cessation medications. – Physician (Bibb County)

Denial/Stigma

- Lack of admission that it causes disease, other than lung cancer. – Physician (Bibb County)
Sexual Health

About HIV & Sexually Transmitted Infections

Although many sexually transmitted infections (STIs) are preventable, there are more than 20 million estimated new cases in the United States each year — and rates are increasing. In addition, more than 1.2 million people in the United States are living with HIV (human immunodeficiency virus).

Adolescents, young adults, and men who have sex with men are at higher risk of getting STIs. And people who have an STI may be at higher risk of getting HIV. Promoting behaviors like condom use can help prevent STIs.

Strategies to increase screening and testing for STIs can assess people’s risk of getting an STI and help people with STIs get treatment, improving their health and making it less likely that STIs will spread to others. Getting treated for an STI other than HIV can help prevent complications from the STI but doesn’t prevent HIV from spreading.

  - Healthy People 2030 (https://health.gov/healthypeople)

HIV

In 2020, there was a prevalence of 529.9 HIV cases per 100,000 population in the Total Area.

Benchmark ► Lower than the Georgia prevalence rate but higher than the US rate.

Disparity ► Highest in Bibb and Peach counties. Dramatically higher among Black residents (especially) as well as among Hispanic residents.

HIV Prevalence
(Prevalence Rate of HIV per 100,000 Population, 2020)

Sources:
  - Centers for Disease Control and Prevention, National Center for HIV/AIDS, Viral Hepatitis, STD, and TB Prevention.
Sexually Transmitted Infections (STIs)

Chlamydia & Gonorrhea

In 2020, the chlamydia incidence rate in the Total Area was 738.4 cases per 100,000 population.

Benchmark ► Well above the state and national rates.

Disparity ► Highest among Bibb County residents.

The Total Area gonorrhea incidence rate in 2020 was 335.9 cases per 100,000 population.

Benchmark ► Worse than the Georgia and US rates.

Disparity ► Highest in Bibb and Baldwin counties.
Key Informant Input: Sexual Health

A plurality of key informants taking part in an online survey characterized Sexual Health as a “moderate problem” in the community.

Perceptions of Sexual Health as a Problem in the Community
(Among Key Informants; Total Area, 2023)

- Major Problem 26.3%
- Moderate Problem 42.1%
- Minor Problem 26.3%
- No Problem At All 5.3%

Sources: 2022 PRC Online Key Informant Survey, PRC, Inc.
Notes: Asked of all respondents

Among those rating this issue as a “major problem,” reasons related to the following:

Sexually Transmitted Infections
- Frequent diagnosis of STD in various populations. – Physician (Peach County)
- When there is high prevalence of diabetes, HIV is usually also high per studies, about 10-15% population correlation. – Community Leader (Peach County)
- Elevated number of STIs in Bibb County. – Physician (Bibb County)
- STD statistics. – Social Services Provider (Bibb County)
- So many incidents of sexual health problems talked about in the community, both treated and untreated. – Community Leader (Baldwin County)

Single-Parent Households
- We have a high percentage, approximately 50%, of child births to unwed mothers. Our young people lack moral education and one of the consequences of unsafe sex with multiple partners is STDs, HIV, etc. – Community Leader (Baldwin County)

Awareness/Education
- I see more problems with STD’s or STI’s in our community because of lack of education as well as lack of planning especially by our teen population. We do have some issues with HIV but that is not at the forefront of what we have seen. I also think that the lack of sexual health leads to unwanted pregnancy as well as violence amongst partners. – Social Services Provider (Bibb County)

Denial/Stigma
- Stigma related to diagnosis, discouraging routine testing. Lack of convenient testing options. – Physician (Bibb County)

Unprotected Sex
- Do not use protection. – Health Provider (Bibb County)
Access to Health Care
Health Insurance Coverage

Type of Health Care Coverage

A total of 51.4% of Total Area adults age 18 to 64 report having health care coverage through private insurance. Another 35.6% report coverage through a government-sponsored program (e.g., Medicaid, Medicare, military benefits).

Health Care Insurance Coverage
(Adults 18-64; Total Area, 2023)

- Private Insurance: 51.4%
- VA/Military: 13.0%
- Medicaid/Medicare/Other Gov’t: 26.4%
- No Insurance/Self-Pay: 9.2%

Sources: 2023 PBC Community Health Survey, PBC, Inc. [Item 117]
Notes: Reflects respondents age 18 to 64.

Lack of Health Insurance Coverage

Among adults age 18 to 64, 13.0% report having no insurance coverage for health care expenses.

Benchmark ► Lower than the Georgia prevalence but higher than the national figure. Fails to satisfy the Healthy People 2030 objective.

Trend ► Decreasing from baseline 2012 findings.

Disparity ► Reported more often among young adults and those in low-income households.
Lack of Health Care Insurance Coverage
(Adults 18-64)

Difficulties Accessing Health Care

About Health Care Access

Many people in the United States don’t get the health care services they need. People without insurance are less likely to have a primary care provider, and they may not be able to afford the health care services and medications they need. Strategies to increase insurance coverage rates are critical for making sure more people get important health care services, like preventive care and treatment for chronic illnesses.

Sometimes people don’t get recommended health care services, like cancer screenings, because they don’t have a primary care provider. Other times, it’s because they live too far away from health care providers who offer them. Interventions to increase access to health care professionals and improve communication — in person or remotely — can help more people get the care they need.

Healthy People 2030 (https://health.gov/healthypeople)

Difficulties Accessing Services

A total of 46.3% of Total Area adults report some type of difficulty or delay in obtaining health care services in the past year.

Benchmark ► Lower than the US figure.

Trend ► Marks a statistically significant increase since 2012.

Disparity ► Highest among Baldwin County respondents. Reported more often among women, younger adults, those with lower incomes, Hispanic respondents, adults of Diverse Races, and LGBTQ+ respondents.

Experienced Difficulties or Delays of Some Kind in Receiving Needed Health Care in the Past Year

Total Area

Sources:
1. 2023 PRC Community Health Survey, PRC, Inc. [Item 119]
2. 2023 PRC National Health Survey, PRC, Inc.

Notes:
* Indicated all respondents
* Percentage represents the proportion of respondents experiencing one or more barriers to accessing health care in the past 12 months.
Barriers to Health Care Access

Of the tested barriers, appointment availability and cost (physician visits and prescription medication) impacted the greatest shares of Total Area adults.

Benchmark ➤ Note that the following barriers affected Total Area respondents less often than reported among Americans nationally: difficulty getting an appointment; inconvenient office hours; difficulty finding a physician; lack of transportation; and language/culture.

Trend ➤ However, these barriers have worsened significantly over time: appointment availability; inconvenient office hours; difficulty finding a physician; and a lack of transportation.

Barriers to Access Have Prevented Medical Care in the Past Year

Among those rating this issue as a “major problem,” reasons related to the following:

Transportation

As a citizen, I can imagine that access to health care is challenging to those who do not have a way to get to health care providers. We do not have public transportation (bus system) and I think the taxis are limited and expensive. – Social Services Provider (Baldwin County)
Transportation is a major issue in access to health care services. There are not enough free or low-cost modes of transportation and the ones we do currently have are very unreliable. Also, access to specialized medicine is limited at a local level. – Public Health Representative (Baldwin County)

Transportation to appointments, co-payments with medications, insurance formularies. – Physician (Bibb County)

Access to Care/Services

The location of the nearest hospital facility. – Community Leader (Peach County)

For people who are poor, insurance that actually pays for everything, from hospitalizations, to medications, to specialists, to rehab, to prevention. – Social Services Provider (Bibb County)

The lack of clinics in underserved areas. – Community Leader (Bibb County)

Affordable Care/Services

The Feed Center free clinic closed and left many patients with no access to free health care. – Physician (Peach County)

The cost. – Social Services Provider (Bibb County)

Affordability of care and transportation to care facilities. Care is also mainly secondary or curative and very little preventative care opportunities exist, especially for low income and or rural communities. – Public Health Representative (Baldwin County)

Medicaid Expansion Needed

Georgia’s failure to expand Medicaid, and the limited benefits for those who do have Medicaid, make it difficult for many people to get the care they need. Specialty care, diagnostic services, surgery, etc., are very difficult for many people to access, even if they are able to get primary care through a FQHC or volunteer clinic. Our FQHC helps thousands of uninsured people access primary care, but there is a great unmet need, and we can’t do more without dedicated providers. – Social Services Provider (Bibb County)

Health care funding policy. It was a huge mistake for a State with a billion plus dollar surplus to not have expanded Medicaid. Next, it is the Healthcare Delivery Enterprise Systems always taking a position of competitive advantage to improve their position, rather than working collaboratively towards the goal of a healthy Georgia. – Physician (Bibb County)

Lack of Providers

Not enough medical providers and not enough diversity of services offered. The county has no dentist, optometrist or ophthalmologist, or mental health care practitioner. – Public Health Representative (Twiggs County)

I know the hospital has good competent people working there, but hopefully Atrium will invest enough in our hospital that they can adequately staff the hospital so the staff aren’t run thin and therefore appear as if they can’t handle the patients that are coming to the floor. It’s sad that with two nursing school in Milledgeville that the hospital isn’t overflowing with nurses. If fact it’s the opposite—but the administration has to have something that will entice them to stay. – Public Health Representative (Baldwin County)

Access to Care for Uninsured/Underinsured

Uninsured or underinsured. – Physician (Bibb County)

For those that need health care services and can’t afford insurance, this area is of huge concern for the community. Not only do they not have insurance, but they also don’t have adequate resources for medication and transportation. – Community Leader (Baldwin County)

Emergency Room Misuse

We see people using ambulance and emergency departments for access to the healthcare system for conditions better suited for primary care practitioners. – Community Leader (Peach County)

The emergency room is often the access point to care. The hospital has a reputation for long waits to be seen and then served. – Community Leader (Baldwin County)

Need to Focus on Wellness

The general approach to healthcare delivery. We allow people to develop issues because there is not as much profit in wellness. – Physician (Bibb County)

Apathy

General apathy toward personal health. – Community Leader (Peach County)
Primary Care Services

About Preventive Care

Getting preventive care reduces the risk for diseases, disabilities, and death — yet millions of people in the United States don’t get recommended preventive health care services.

Children need regular well-child and dental visits to track their development and find health problems early, when they’re usually easier to treat. Services like screenings, dental check-ups, and vaccinations are key to keeping people of all ages healthy. But for a variety of reasons, many people don’t get the preventive care they need. Barriers include cost, not having a primary care provider, living too far from providers, and lack of awareness about recommended preventive services.

Teaching people about the importance of preventive care is key to making sure more people get recommended services. Law and policy changes can also help more people access these critical services.

— Healthy People 2030 (https://health.gov/healthypeople)

Access to Primary Care

According to latest reports, there are currently 515 primary care physicians in the Total Area, translating to a rate of 109.8 primary care physicians per 100,000 population.

Benchmark ► A greater ratio than reported statewide.
Disparity ► The ratio is lowest in the Other Counties area.

Number of Primary Care Physicians per 100,000 Population (2023)

Notes: • Doctors classified as “primary care physicians” by the AMA include general family medicine MDs and DOs, general practice MDs and DOs, general internal medicine MDs, and general pediatrics MDs. Physicians age 75 and over and physicians practicing subspecialties within the listed specialties are excluded.
Specific Source of Ongoing Care

A total of 68.5% of Total Area adults were determined to have a specific source of ongoing medical care.

Benchmark ► Fails to satisfy the Healthy People 2030 objective.
Disparity ► Lowest in Bibb and Baldwin counties.

Have a Specific Source of Ongoing Medical Care
Healthy People 2030 = 84.0% or Higher

Utilization of Primary Care Services

Adults

Three in four adults (74.9%) visited a physician for a routine checkup in the past year.

Benchmark ► Higher than the US prevalence.
Trend ► Denotes a significant improvement since 2012.
Disparity ► Lowest in Baldwin County. Reported less often among young adults, those in low-income households, Hispanic respondents, and LGBTQ+ respondents.

Oral Health

About Oral Health

Tooth decay is the most common chronic disease in children and adults in the United States. ...Regular preventive dental care can catch problems early, when they’re usually easier to treat. But many people don’t get the care they need, often because they can’t afford it. Untreated oral health problems can cause pain and disability and are linked to other diseases.

Strategies to help people access dental services can help prevent problems like tooth decay, gum disease, and tooth loss. Individual-level interventions like topical fluorides and community-level interventions like community water fluoridation can also help improve oral health. In addition, teaching people how to take care of their teeth and gums can help prevent oral health problems.

– Healthy People 2030 (https://health.gov/healthypeople)

Dental Insurance

Most Total Area adults (72.3%) have dental insurance that covers all or part of their dental care costs.

Benchmark ► Fails to satisfy the Healthy People 2030 objective.

Trend ► Marks a statistically significant increase since 2012.

Disparity ► The prevalence is lowest in Baldwin County.

Have Insurance Coverage That Pays All or Part of Dental Care Costs

Key Informant Input: Oral Health

Key informants taking part in an online survey most often characterized Oral Health as a “moderate problem” in the community.

Perceptions of Oral Health as a Problem in the Community (Among Key Informants; Total Area, 2023)

Major Problem  Moderate Problem  Minor Problem  No Problem At All

25.0%  48.3%  23.3%  3.3%

Source: 9 2023 PBC Online Key Informant Survey, PBC, Inc.
Notes: 9 Asked of all respondents.
Among those rating this issue as a “major problem,” reasons related to the following:

**Access to Care for Uninsured/Underinsured**
- Uninsured and lack of access. – Physician (Bibb County)
- Lack of dental care for the uninsured. – Social Services Provider (Bibb County)
- Most people don’t have dental insurance. – Community Leader (Baldwin County)
- Dental care is the least insured health care. People have a tendency not to go until it’s necessary. – Community Leader (Baldwin County)

**Affordable Care/Services**
- Many avoid needed treatments due to cost. – Social Services Provider (Houston County)
- Many do not go to the dentist at all, either due to cost, as they have no dental insurance, or they don’t think it is necessary. Lack of knowledge of how bad oral health can affect other systems. – Health Provider (Bibb County)

**Lack of Providers**
- No dentist in the county. A high number of wells for drinking water in the county leads to decreased fluoridated water intake. A food desert. – Public Health Representative (Twiggs County)

**Access to Care/Services**
- Oral health care is even less accessible than physical health. – Social Services Provider (Bibb County)

**Incidence/Prevalence**
- Many people with poor dentition. – Community Leader (Peach County)

**Income/Poverty**
- A major problem with the working poor and homeless. Many without teeth. – Community Leader (Bibb County)
Local Resources
Perceptions of Local Health Care Services

Most Total Area adults rate the overall health care services available in their community as “excellent” or “very good.”

Rating of Overall Health Care Services Available in the Community (Total Area, 2023)

- Excellent 20.5%
- Very Good 11.0%
- Good 37.6%
- Fair 20.5%
- Poor 3.5%

Sources: PRC Community Health Survey, PRC, Inc. [Item 5]
Notes: Asked of all respondents

However, 14.5% of residents characterize local health care services as “fair” or “poor.”

Benchmark ► Worse than the national prevalence.

Disparity ► Considerably higher in Baldwin County. Reported more often among adults under 65, those in low-income households, White respondents, Black respondents, and people with recent access difficulties.

Evaluation of Past Activities

The CHNA Implementation Strategy was developed for calendar years 2018-2020 and addressed seven “priority” needs identified by community participants, i.e., access, behavioral health, diabetes, nutrition/physical activities, etc. Many of the implementation strategies required community-facing events. In mid-March 2020, the Centers for Disease and Prevention declared COVID-19 pandemic in the United States. Due to the COVID-19 pandemic restrictions and organization policy, many events were cancelled or suspended; other disease-specific events moved from face-to-face to social media platforms, online meetings, and/or telephone calls.

The Elevate magazine continued to be mailed to 20,000 homes quarterly and the digital newsletter is mailed to approximately 6500 subscribers monthly as well as the previous editions can be found on the Atrium Health Navicent website. One of the stellar programs, “Walk with a Doc” was suspended from April 2020 to November 6, 2020. The program resumed on November 7, 2022 and has an average of 10-12 participants per walking event. Research conducted on this program showed that one participant reported that she lost 25 lbs. thereby reducing her A1c from 10 to 6.3. The walking trails on the hospitals’ campuses were maintained for the community participants to continue their walking exercise programs. Once the pandemic began to be controlled, the team quickly moved into areas of focus based on the current identified needs that had emerged throughout the COVID-19 pandemic. The Care Management programs have been effective in assessing the real time gaps in care for the vulnerable patients in Bibb, Baldwin, Peach and surrounding counties. Once assessed, new programs were launched at an accelerated pace to meet those needs. The following statements show the progress made in the three year period:

In 2021, Atrium Health Navicent developed and implemented a Care Model to address Health Disparities within African American Congestive Heart Failure patients discharged from Atrium Health Navicent, The Medical Center (in Bibb County). This effort addressed cardiovascular disease issues and resulted in a decrease in African American readmissions 19.66% to 17.03% (13.4% decrease)

In 2022, Atrium Health Navicent developed and implemented a Care Model to address Health Disparities within African American Diabetes patients discharged from Atrium Health Navicent, The Medical Center (in Bibb County). This effort addressed Diabetes issues and resulted in a decrease in African American readmissions for Diabetes from 16.12% to 13.9% (13.7% decrease)

In 2020, Atrium Health Navicent developed and implemented COVID-19 vaccinations in senior towers, homebound patients and other selected groups (in Bibb, Peach and Baldwin Counties). This effort addressed Access to Care issues. We administered 37,605 total vaccines of which 2619 were administered to vulnerable pop via mobile.

In 2019, Atrium Health Navicent supported the transformational community at Tattnall Fields with the placement of a care coordinator (in Bibb County). This effort addressed Access to Care issues. Supported from May 2019 to Dec 2019:

- Enrolled 20 families and assessed for SDOH needs.
- Sponsored a mobile food pantry benefiting 595 people
- Provided Blood pressure checks to 110 individuals and blood sugar screens to 106.
- Implemented a Walking Club that engaged 16 families.

In 2022, Atrium Health Navicent developed and implemented a High-Risk OB Care Management Program (in Bibb County). This effort addressed Access to Care and Maternal Health issues. 50 patients have been identified from 11 counties and are receiving assistance with their social drivers of health issues.
In 2022, Atrium Health Navicent developed and implemented a Food As Medicine Market, Specialized Food Pantry (in Bibb County). In 2022, 482 people were seen at The Food As Medicine Market, and 28,972 pounds of food was distributed (feeding 1,838 people). This effort addressed Food Security and Nutrition issues.

In 2022, Atrium Health Navicent developed and implemented a Food As Medicine Market, Food Farmacy (in Bibb County). In 2022, 344 people were seen at The Food As Medicine Market, and 28,972 pounds of food was distributed (feeding 1,838 people). This effort addressed Food Security and Nutrition issues.

In 2021, Atrium Health Navicent developed and implemented a Care Model to address readmissions for high-risk Congestive Heart Failure patients discharged from Atrium Health Navicent, The Medical Center (in Bibb County). In 2022, 640 people were enrolled, readmission rates decreased 11.43%. This effort addressed cardiovascular disease issues.

In 2022, Atrium Health Navicent developed and implemented a Care Model to address readmissions for high-risk Diabetes patients discharged from Atrium Health Navicent, The Medical Center (in Bibb County). In 2022, 750 people were enrolled, readmission rates decreased 10.9% . This effort addressed Diabetes issues.
